

Exploring the Unknown

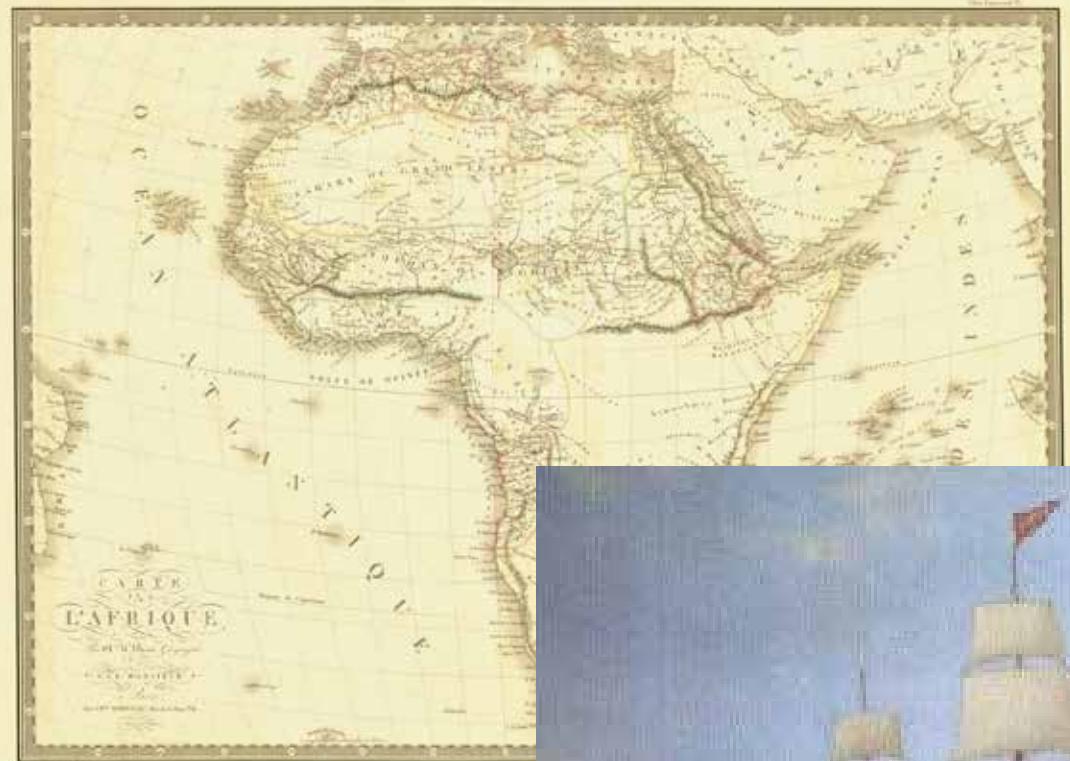

CWT/e Research Retreat 2019

Peter Baltus, 20191009

The Problem

Exploration

is old

Exploration

is old

The era of adventures
is over

Or is it?

...

What about
“Unknown
environments?”

Is it possible to explore
“Unknown
Environments?”

Existing Solutions:

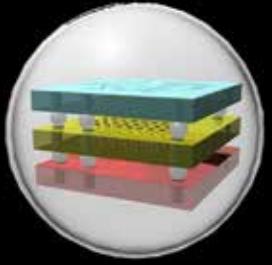

- Modeling
- Imaging (US/THz/X-ray/Optical/...)
- Spectroscopy
- Endoscopy
- Sensors/Sensor Swarms

Sensor Solution:

If Brute Force not Acceptable:

Use Sensor for Exploration

Sensor Design Choices

How often?

How big?

How many?

How expensive?

How heavy?

How accurate?

Which parameters?

How long?

Sensor Problem:
Impossible to design
Optimum sensor
for truly
Unknown
Environments

The Solution

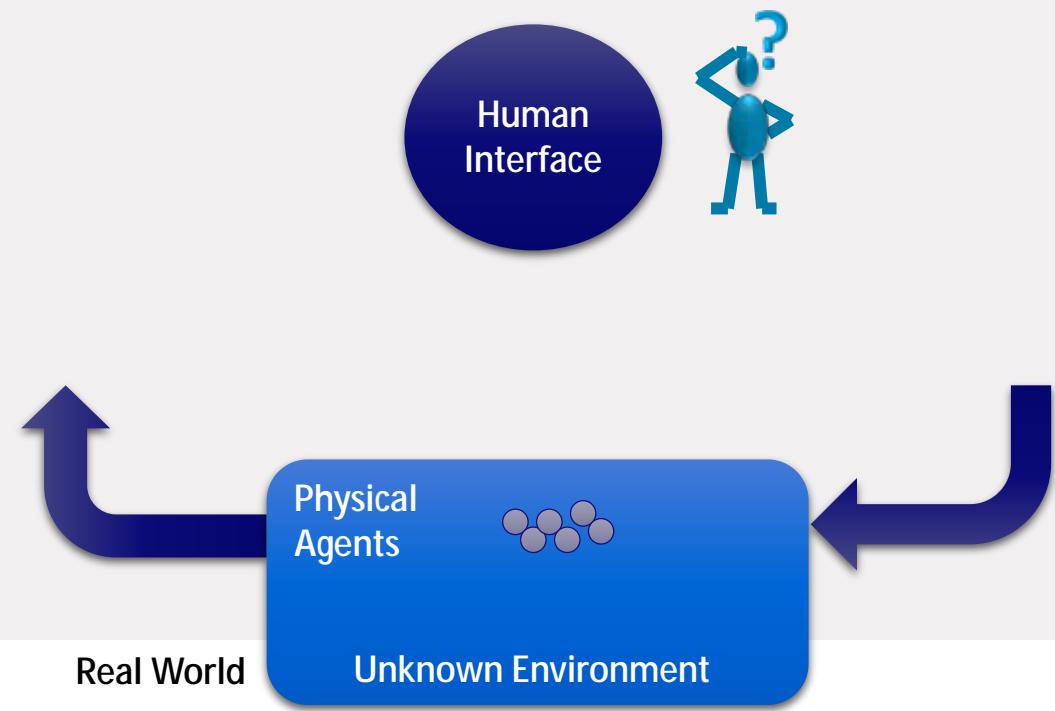

Phoenix Systems Overview

Pose question (top-down)

Observe unknown environment (bottom-up)

- Inject agents
- Agents have limited programmability: “instincts”
- Recover subset of agents

Phoenix Systems Overview

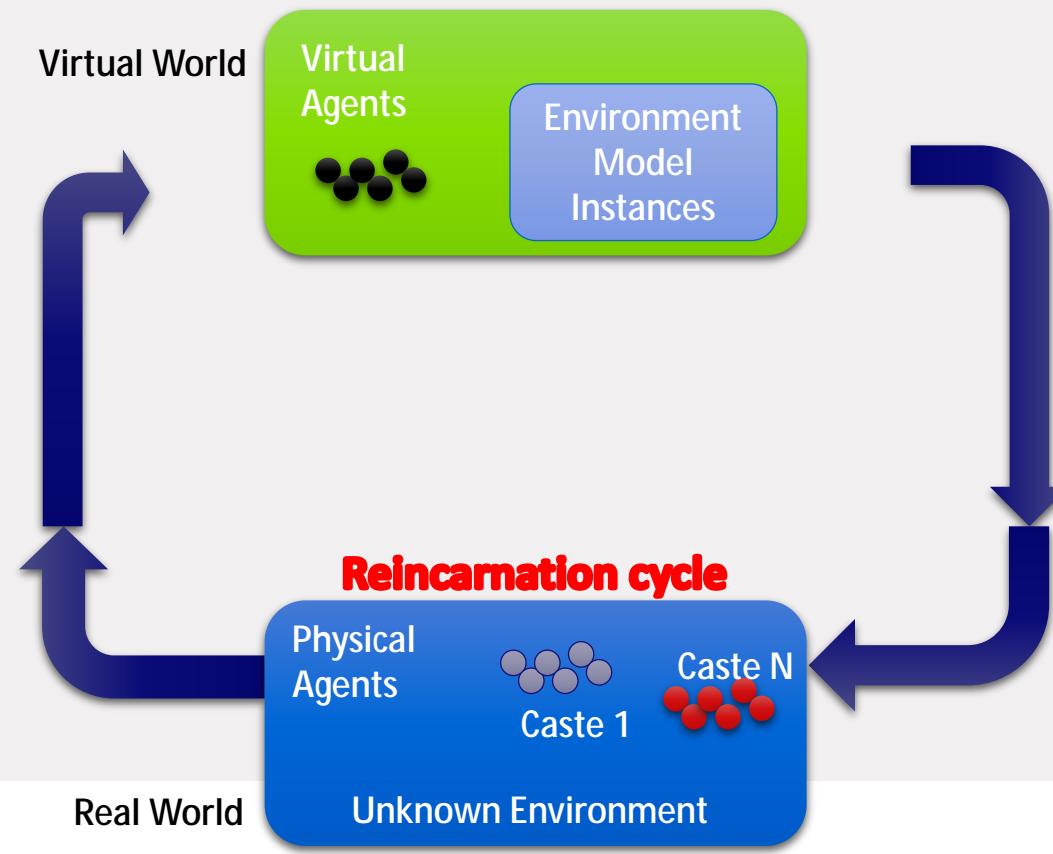

Agents can have different roles: “Caste”

Phoenix Systems Overview

Use virtual world to iteratively:

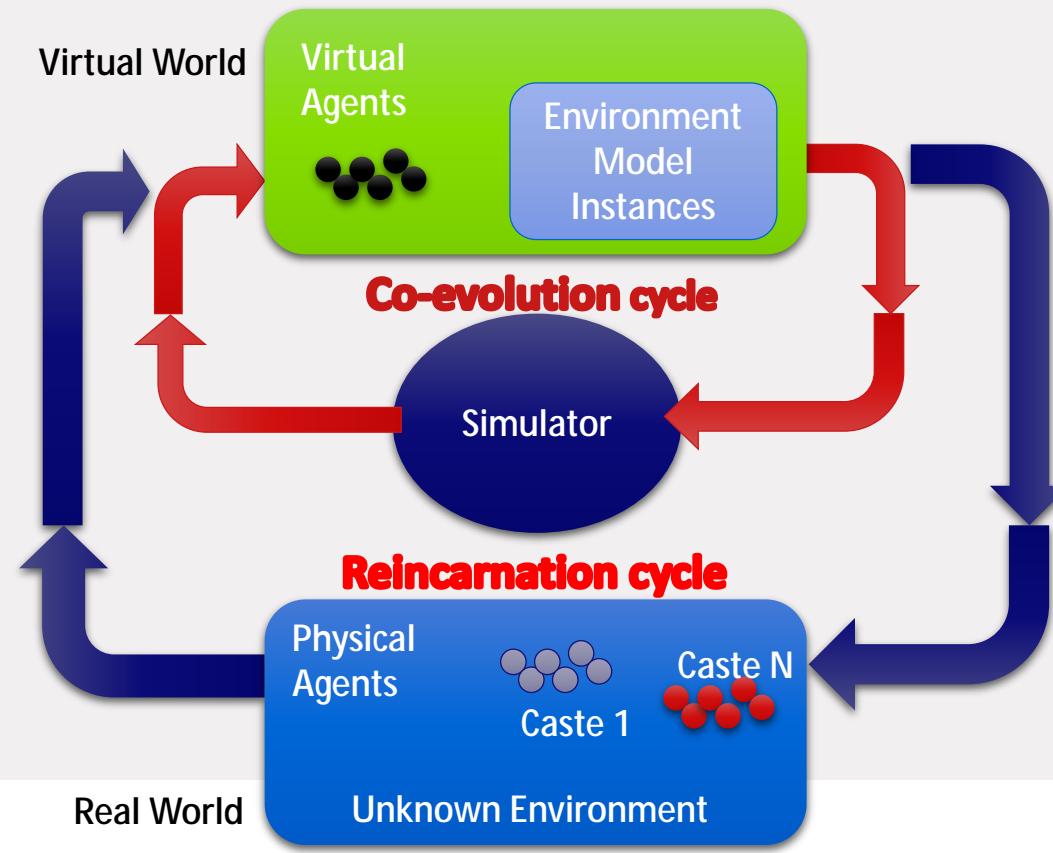

- build & test model
- Optimize (instincts of) agents (“reincarnation”)

Phoenix Systems Overview

Automate model & agent improvement:

- Interleaved Knowledge-driven Co-evolution
- Many Co-evolution cycles interleave with each Reincarnation cycle

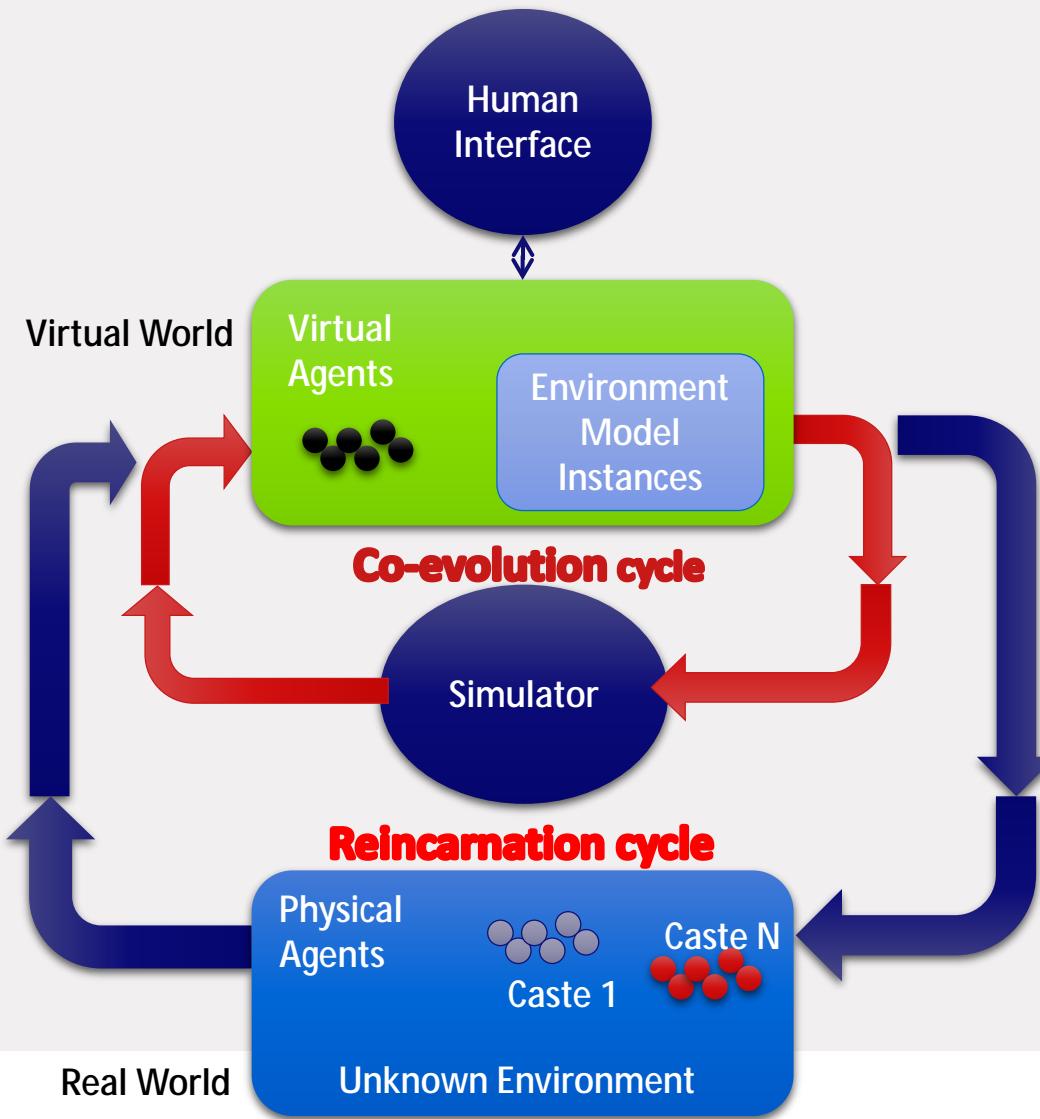

Phoenix Systems Overview

Application expert interface to Co-evolution:

- Questions & answers
- Provide knowledge

Source: Flickr, myfuture.com
CC BY-ND

Technology expert interface to Co-evolution:

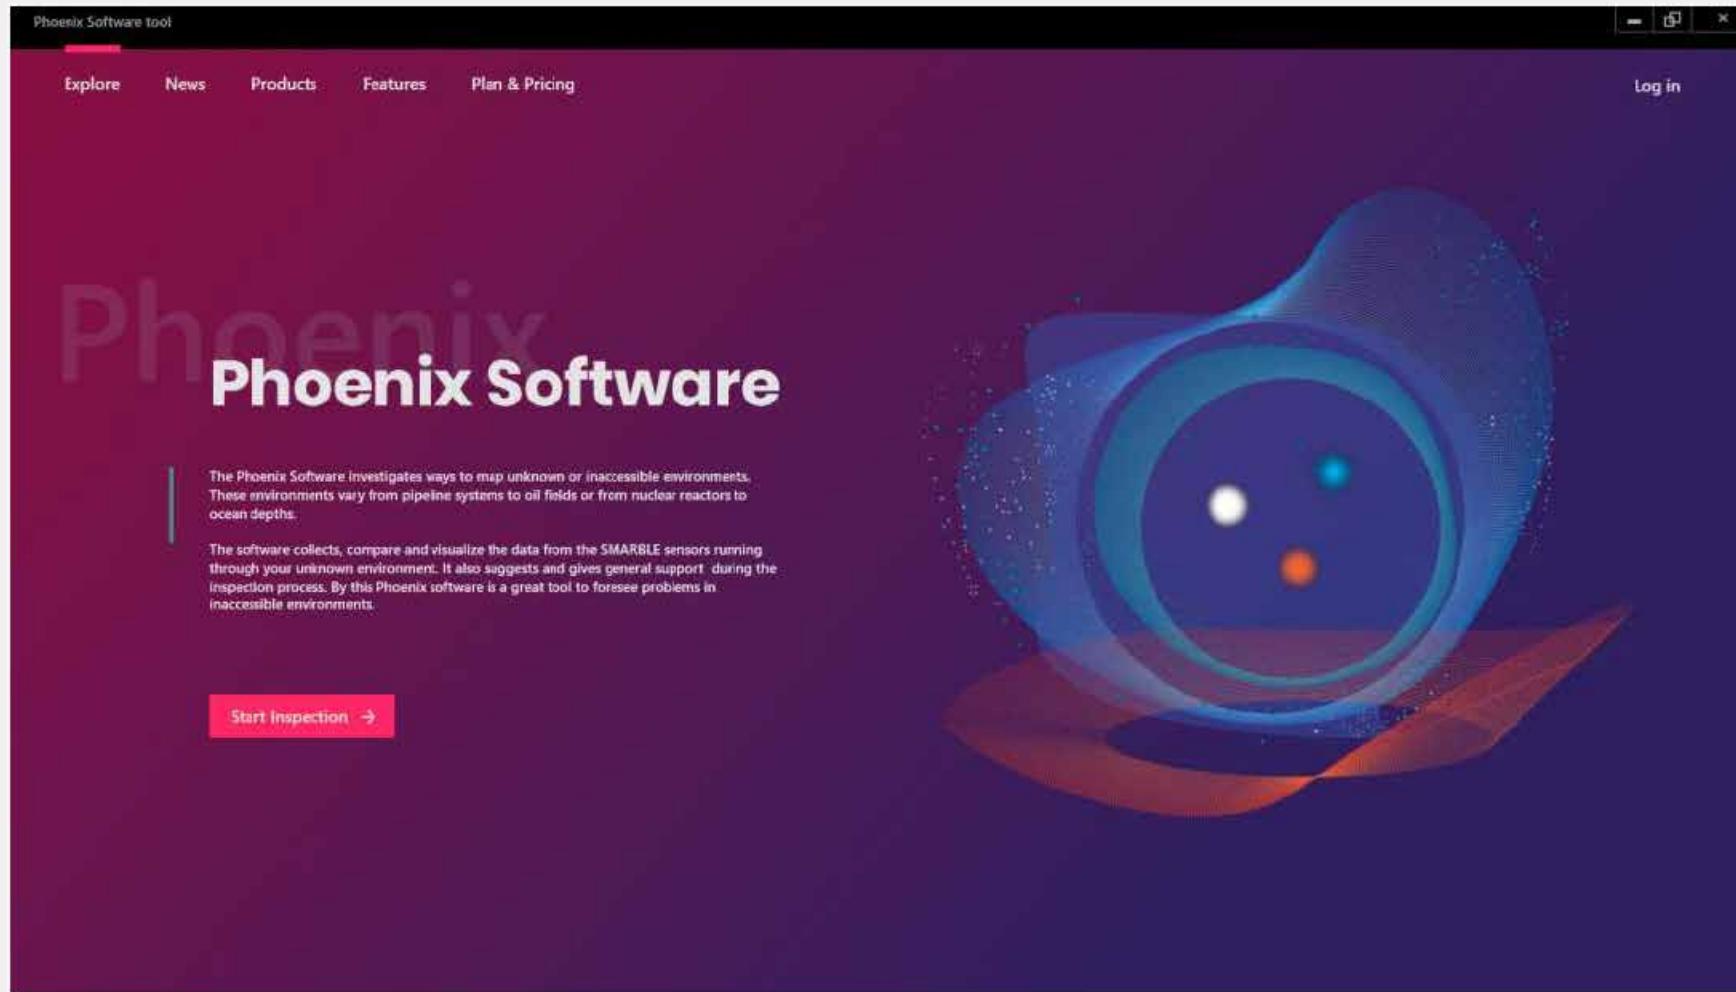

- Steer evolution
- Define convergence
- Provide knowledge

Research: The Team

Results: Human Interface

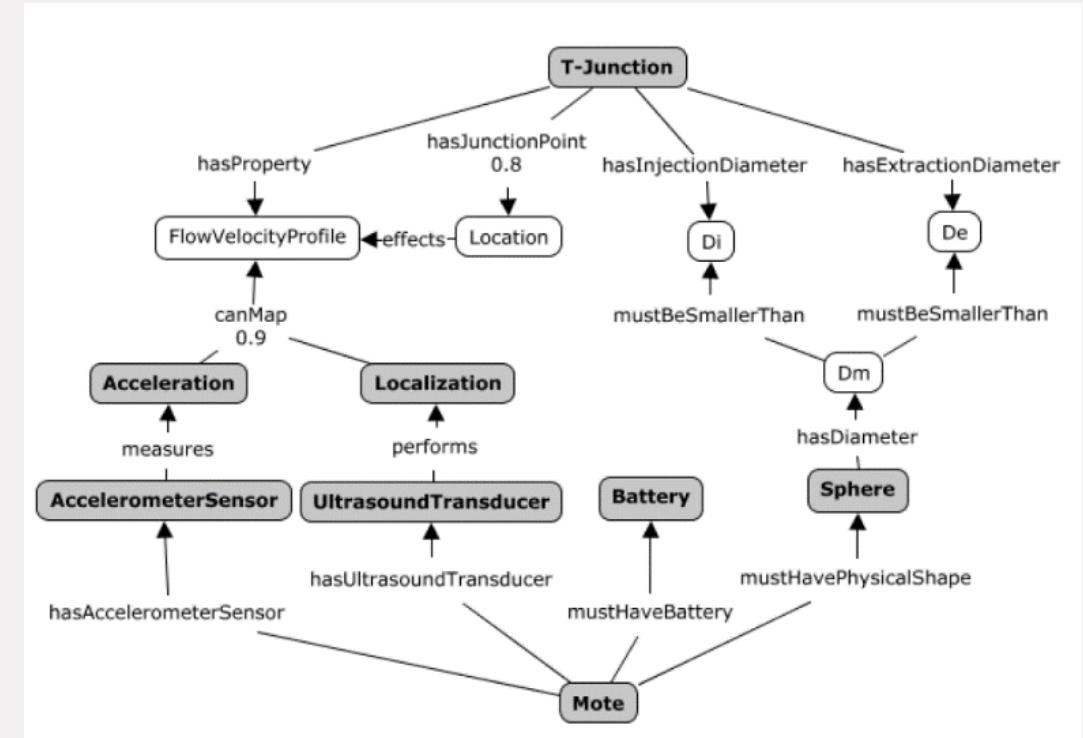

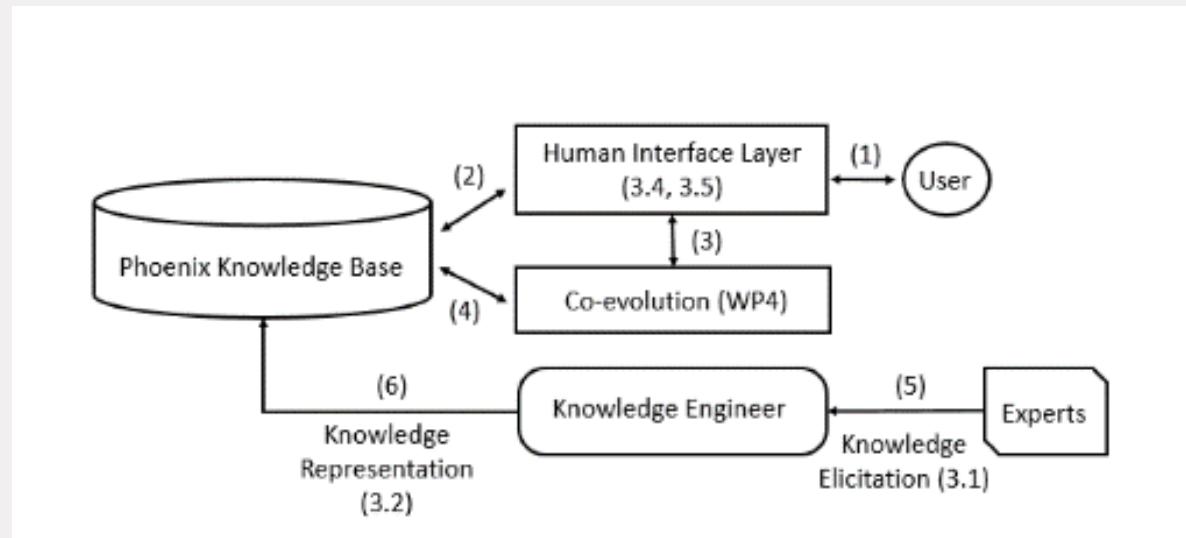

Results: Knowledge Base

Inaccessible & Unknown Environments: à Uncertain knowledge

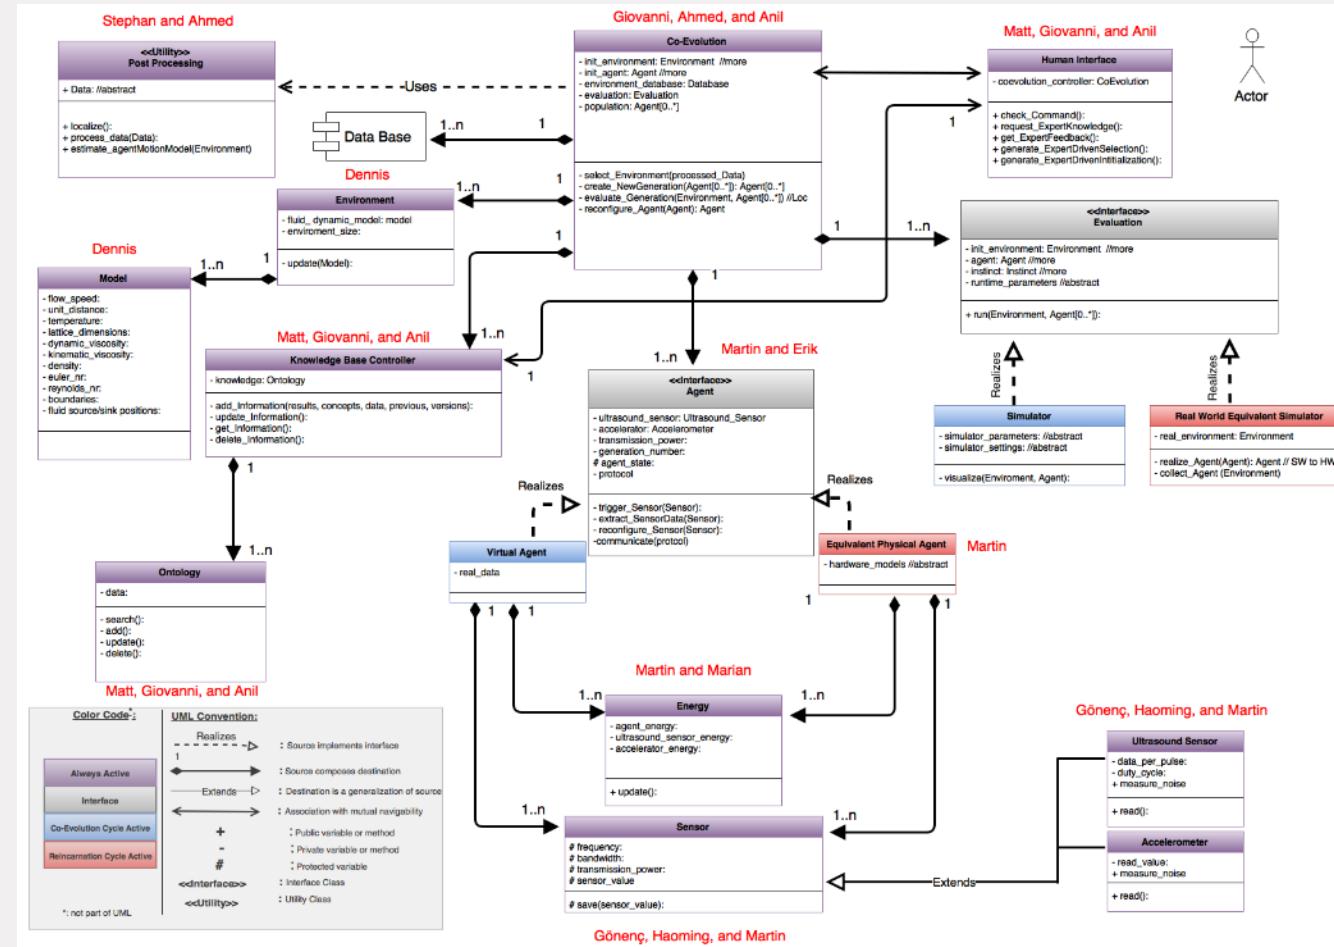

Results:

Methods & software for storing, retrieving
And processing of uncertain knowledge

Results: Co-Evolution

Results:
 Co-evolution
 Environment
 Model &
 Virtual
 Motes
 Exploration
 of Library-
 based
 Environment
 simulation

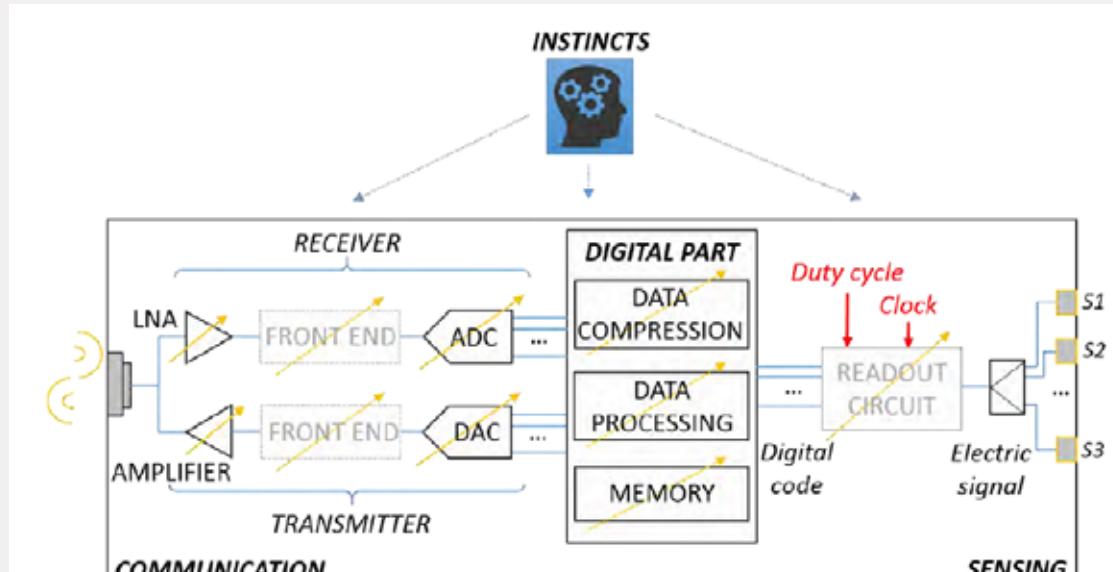

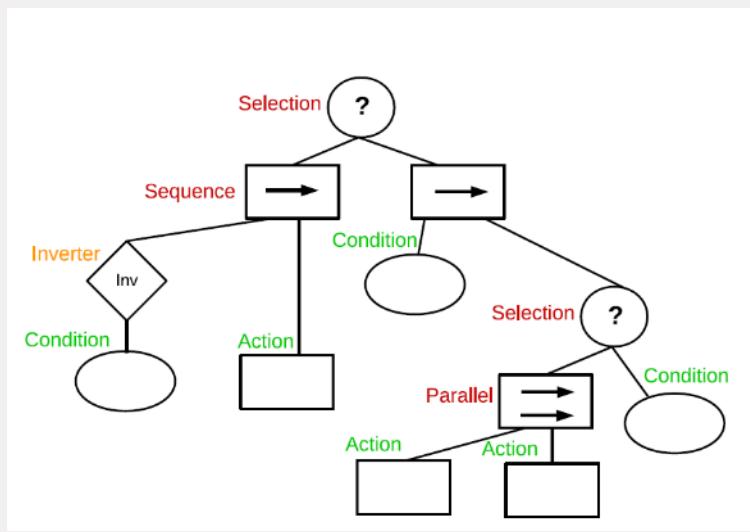

Results: Instincts

Results:

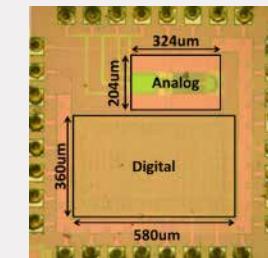

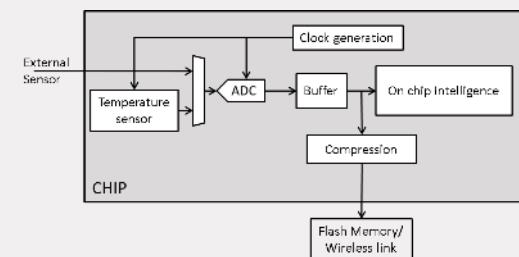

Flexible low-power processing core

Instincts using BT/BN

Low-power robust & evolvable behavior

Digital processing core

Sense and compress, instincts

Results: Sensors

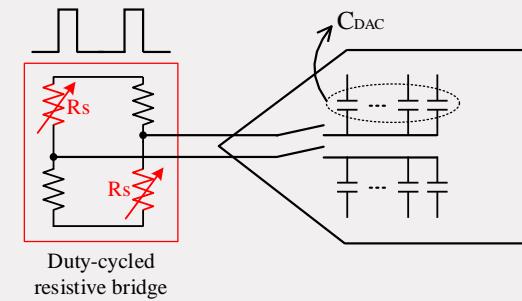

Results:

Extremely low-power flexible sensor interface

Fully integrated

Capacitive & resistive sensors

> 1000x power reduction over existing ICs

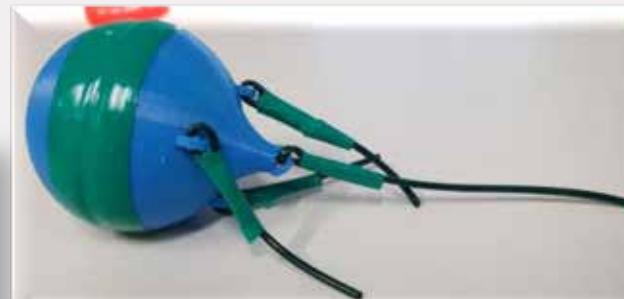

Resistive, capacitive, impedance sensors

Results: Motes

Research results:

Many castes: different sensors/memory/etc.

Both motes & critical components for micro

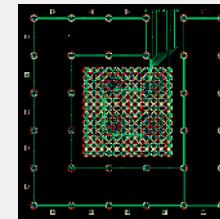

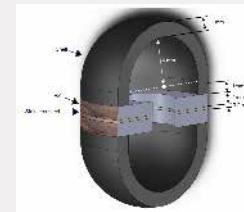

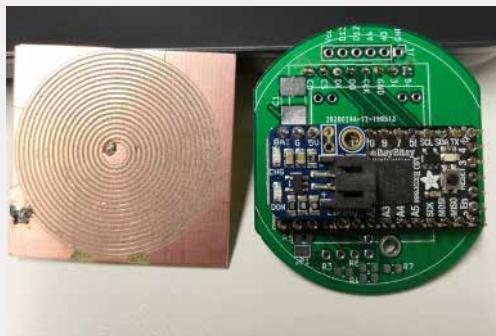

Results: Localization

Results:

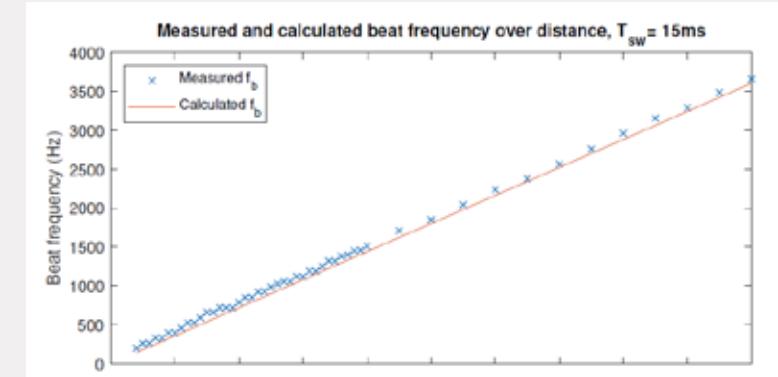

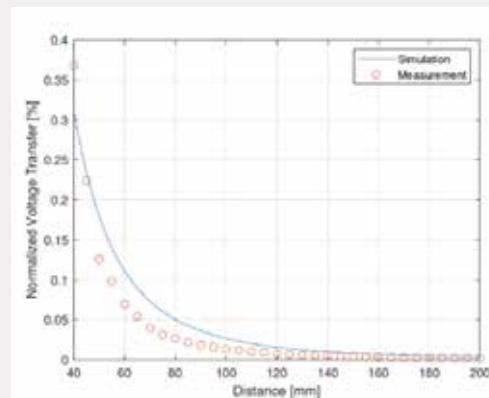

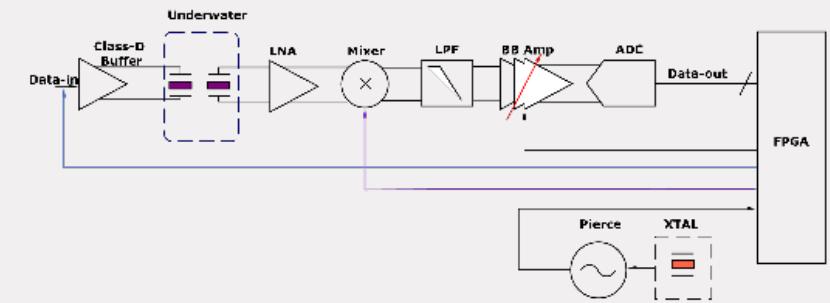

FMCW ultrasound
communication/localization
technology

Break-through high accuracy inertial
navigation

Accurate & low-power NFM
communication/localization
technology

Ultrasound transducer & transceiver

Results: Evaluation

Result:

Straight line with T-junction test

Set-up (now stored) + data

Simple start

Single, short runs (< 10 s)

Single variable (T-junction)

Constant pressure from buffer

Outside, summer only

Environment gets wet

Scientists/students get wet

Off-the-shelf components: DIY

Results: Evaluation

Results:

Pipeloop test

Set-up + data

"Infinite" runs

Random paths

Atmospheric pressure

Speed up to 30cm/sec

Controlled insert/extract

Modular, many variables

Transparent for ground truth

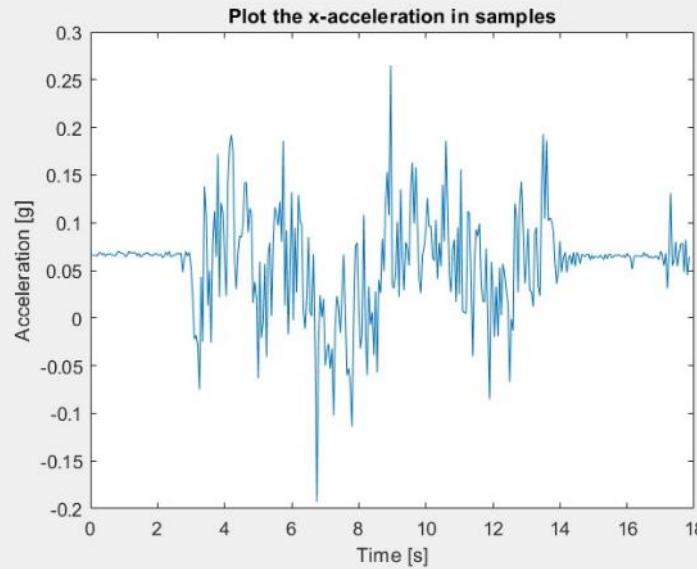

Off-the-shelf parts: DIY

Scientist & environment
remain dry (mostly)

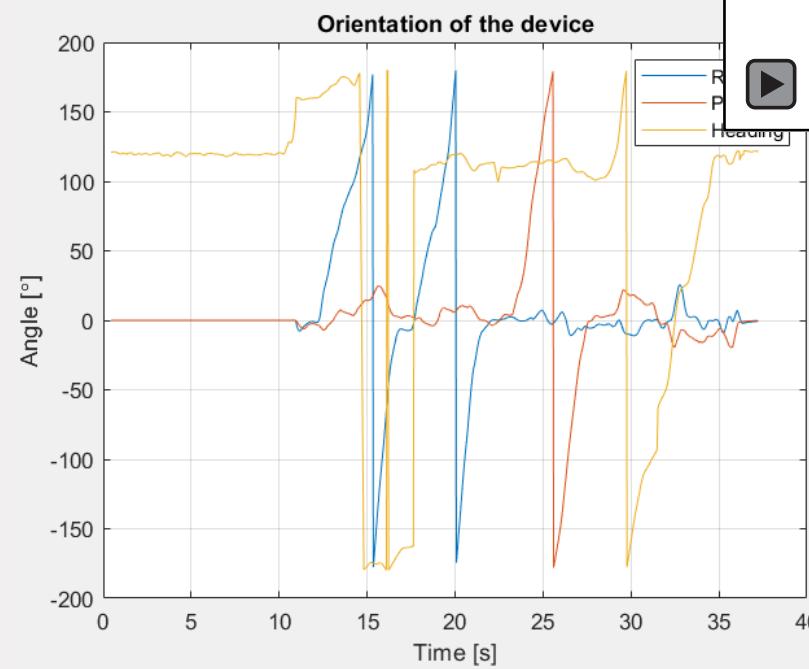

Picture: © 2019, Bart van Overbeeke Fotografie

Results: Data

- Results:
- Raw data
 - Processing
 - Analysis

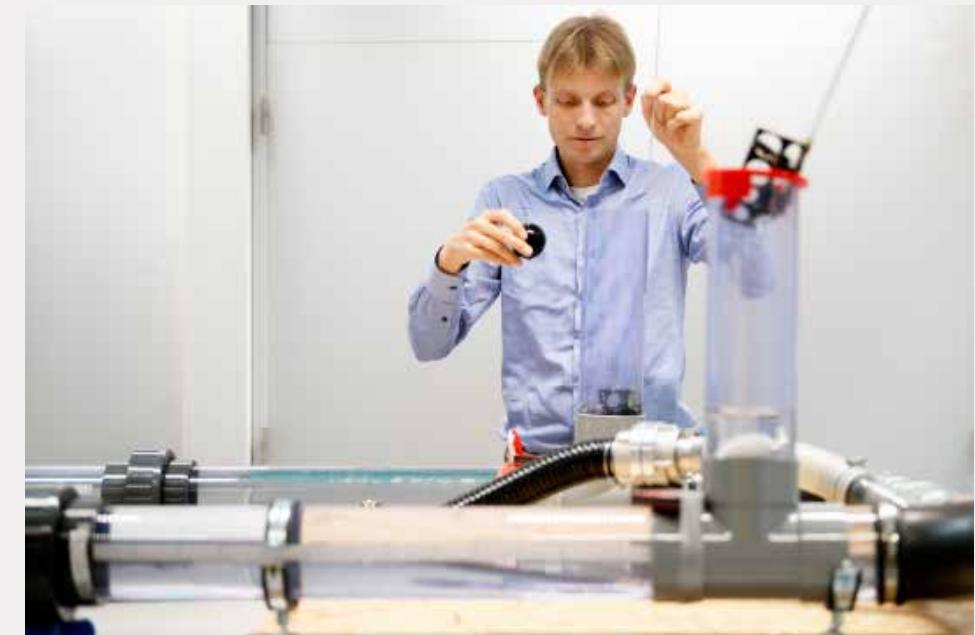

Results: Concept Verification

Demonstrated repeatable performance increase through co-evolution:

- Reconstruct pipe layout pipeloop from inertial navigation sensors
- Accuracy Improvement from ~ 80% to > 90% in 1 loop
- Energy consumption reduction ~ 20% in 1 loop

Through adjustment of instincts for:

- Sensor configuration:
 - Sample rate
 - Resolution
- Data compression

Results: Documentation

Publications

Presentations/workshops

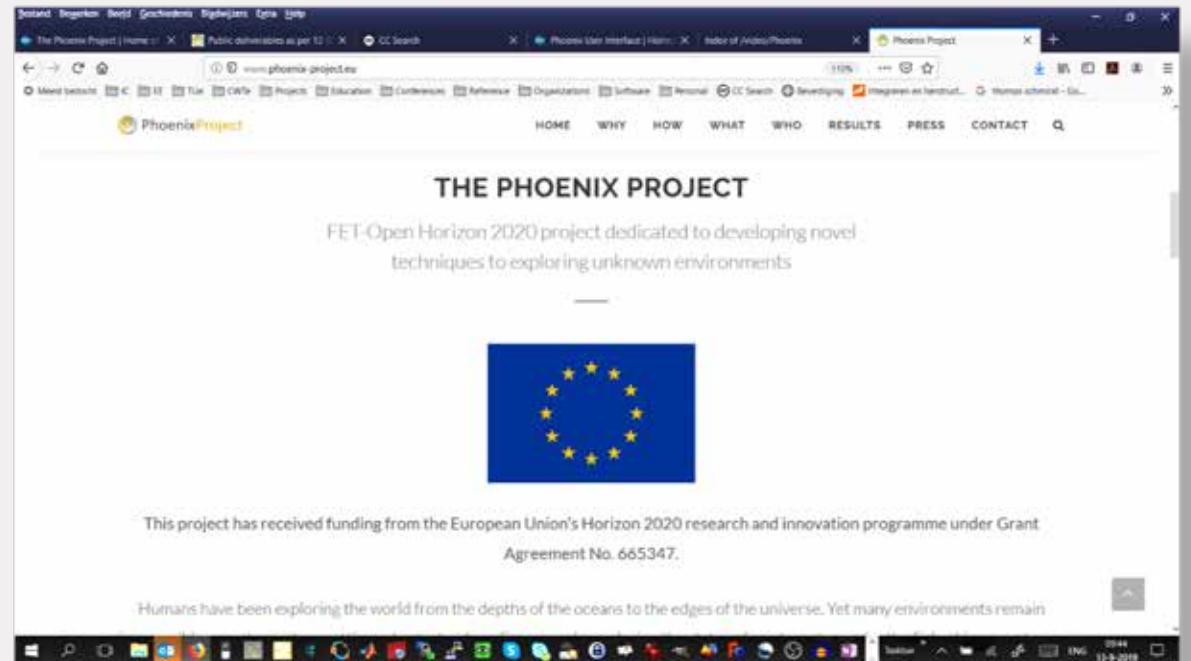

Movies, pictures, data

Designs

Software

All available at website:

<https://www.phoenix-project.eu>

The Applications

Applications

Pipelines

Healthcare

Underground rivers

Mixing reactors

Nuclear reactors

"Underground River" by Captain Chaos is licensed under [CC BY-NC-SA 2.0](#)

"Patient Talking With Doctor" by NIHClinicalCenter is licensed under [CC BY 2.0](#)

"Nuclear reactor pool" by kehworks is licensed under [CC BY-NC 2.0](#)

"Live oak ..." by peter.clark is licensed under [CC BY-NC 2.0](#)

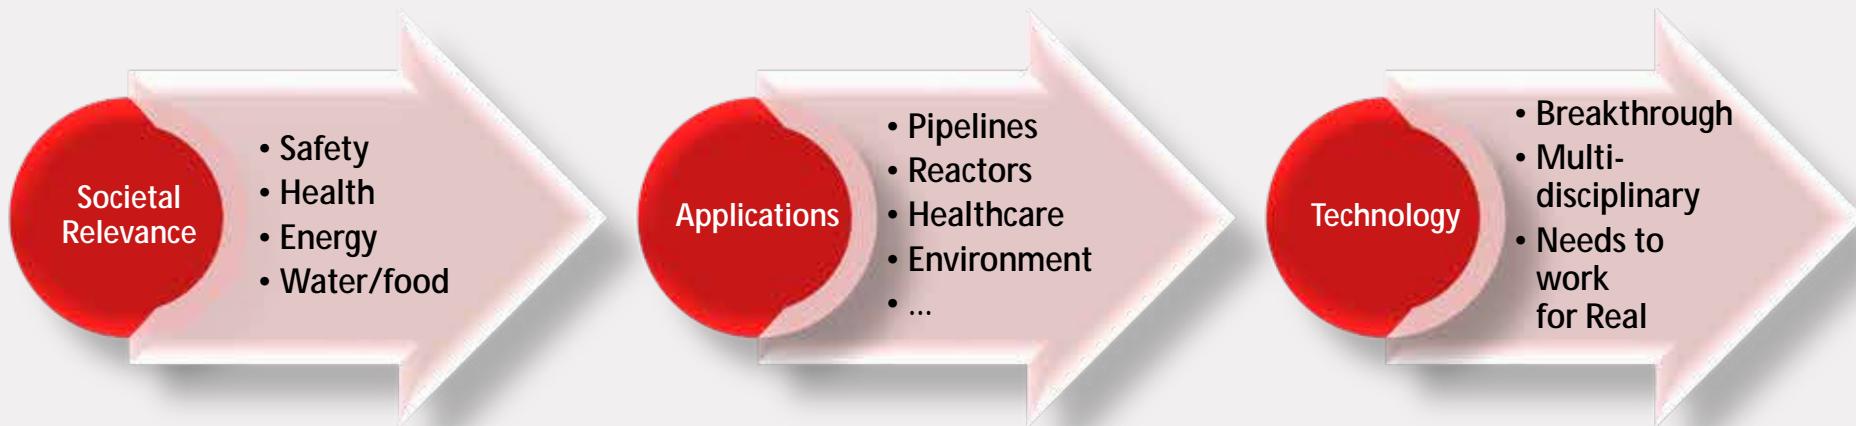

Societal Relevance: Why these applications?

**Addressing primary
human needs:**

- Safety
- Health
- Energy
- Water/Food

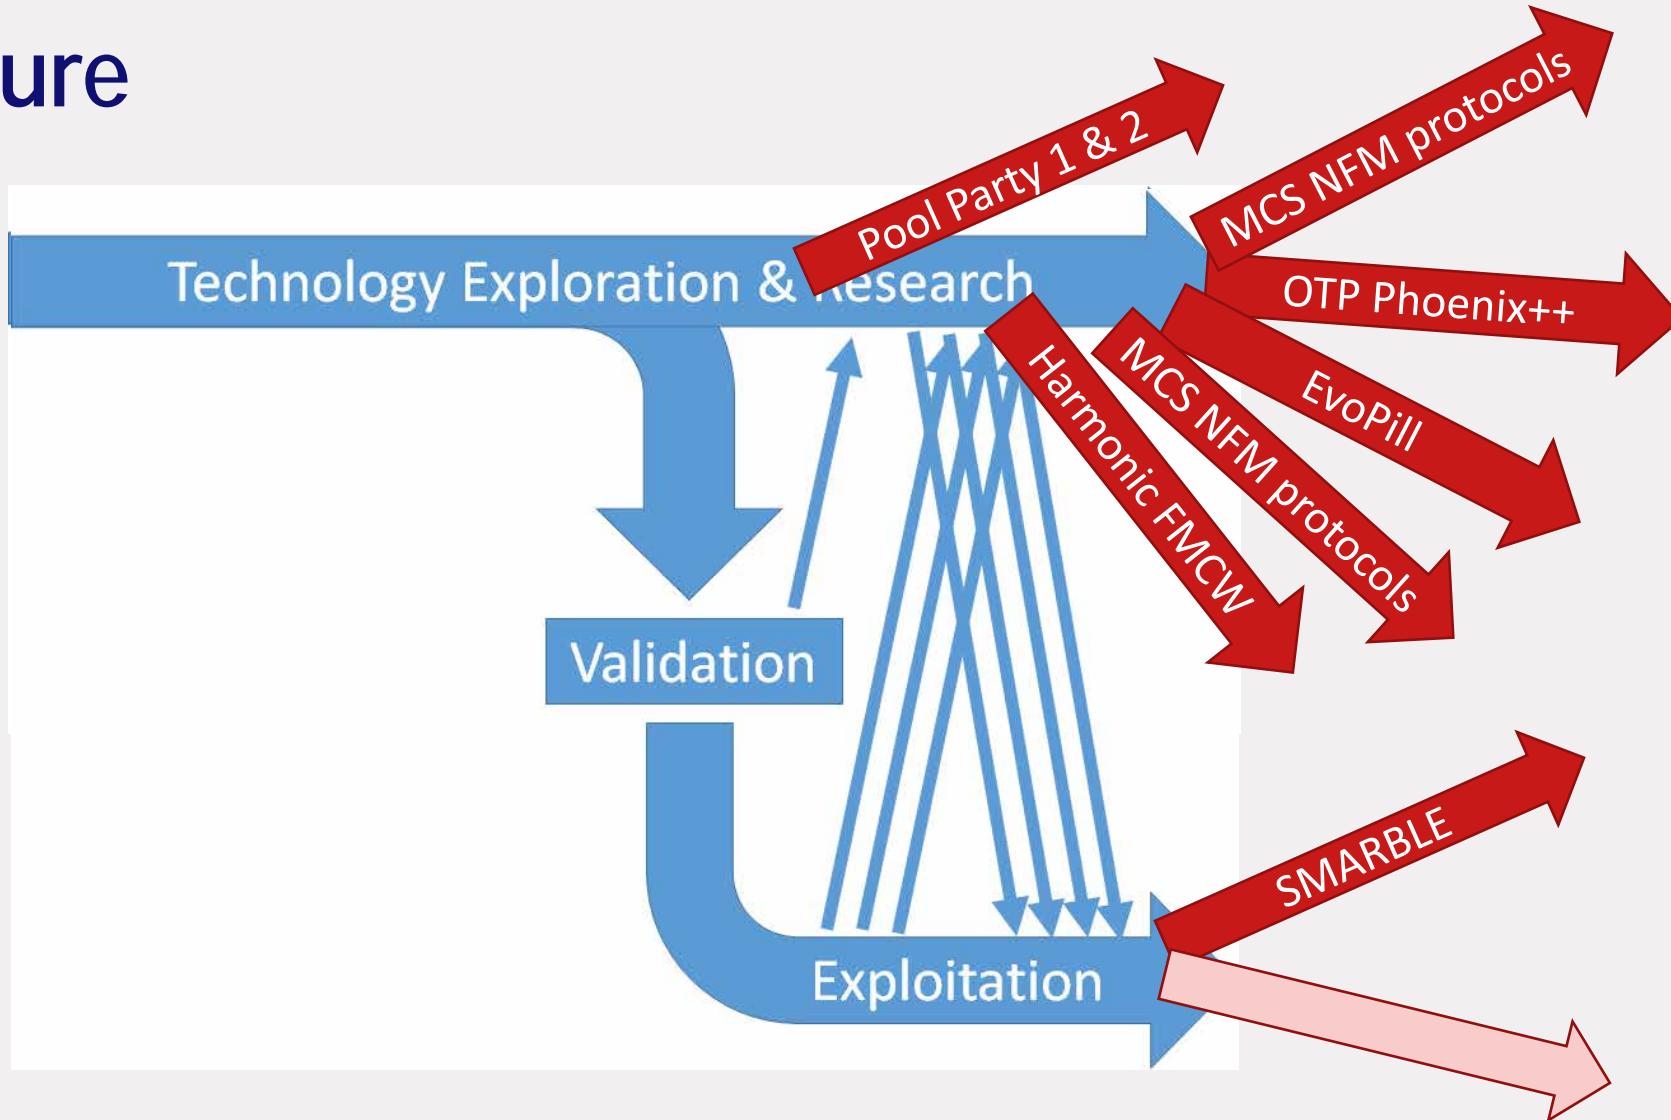

Societal Relevance: Consequence

Needs to work for Real!

The Future

The Future

The Future: Next Steps

Phoenix End-of-Project Outreach:

CWT/e research retreat, Workshop etc.

Background story:

<https://www.tue.nl/nieuws/features/go-with-the-flow-speuren-naar-het-onbekende-met-een-zwerm-slimme-knikkers/>

Finalizing & Releasing Complete Documentation

Research Continuation:

Advanced applications: further miniaturization

Advanced applications: swarms of actuators

Industrialization:

Real-world tests with application partners

Look for "SMARBLE": <https://www.smableproject.eu/>

Bonus: Build your Own Swarm

Software design

à Open source

COTS Hardware designs

à Open source

Firmware designs

à Open source

Mechanical design

à Open source

Data

à Open source

Released over next month at <https://www.phoenix-project.eu>

Limitations:

- Some commercial libraries, tools used
- IC design library NDAs do not allow making full design database open source
