

INDUSTRIAL DESIGN INTERN.

EDMIRE is looking for ...

a candidate who is the final year of their M.A. in an industrial design related educational training programme and who would describe themselves as:

- a natural troubleshooter, decision maker, and problem solver;
- a hands-on designer;
- a sustainability expert (or eager to learn all about it);
- someone with a heightened sense of reality;
- someone with a 'Carpe Diem'-style of being;

ABOUT EDMIRE

Edmire is a young and dynamic design and innovation studio that creates atypical yet well thought-out designs with an eye for sustainability. It is Edmire's goal to work towards a brighter environmental future. We believe that mindful design positively contributes to our planet, because everything we develop has an impact on days to come.

However, we want to be a holistic example in all corporate areas, not just when it comes to design. We therefore strive to obtain a B-corp certificate as a token of our values.

Our design ideas and concepts are backed up by a sustainable strategic vision, innovative ideas, and emotional storytelling. An enthusiastic group of ten designers – whom all have expertise in

research and strategy, industrial design or brand design – work together as an ambitious team. In addition to the development of personal projects, Edmire designs various products on behalf of clients such as Boma, Babymatters, Soudal, Leo Papers products, Greenspeed, Care.org, Future Cleaning Technologies ...

YOUR TASK

The Industrial Design Interns of Edmire are key in supporting the development of meaningful and useful products for our customers. Therefore, you must know exactly how to turn the customer's vision and wishes into an innovative and exclusive product.

- You are a genius that knows his way around innovative products and technologies.
- You can easily discover creative solutions for our clients.
- You feel self confident enough to work on your own project imposed by Edmire as your ultimate internship challenge.
- You can show relevant experience in your portfolio based on previous training-related projects and explain well what your role was during the project you've collaborated on. You know how to translate your experiences into an added value for Edmire.

EXPECTATIONS:

education/experience

- You are in your final year of your M.A. in Industrial Design (or a similarly relevant degree).

personality

- Quality is by far the most important value in everything you do. You aren't content until all details have been laid out perfectly.
- You are creative, hands-on, and a team player.
- You have an eye for detail and a natural commercial flair.
- You're not reluctant to share colleague's knowledge and expertise in production.

designer skills

- You are an all-round designer who stands strong in the technical field.
- You are a wizard when it comes to 'visual' skills in 2D & 3D.
- You are a master in parametric and surface design, with a preference for Solidworks.
- You can build prototypes and mockups.
- You apply design methods focussed on putting consumers first.
- Developing concepts is something which doesn't sound like Chinese.
- You're a master in hand sketching and digitalising these babies in adobe applications.
