

Phase 1 Report of the Graduation Project

Preparation phase

Development of a portable and sustainable cooking device

Master: Sustainable Energy Technology
Department: Mechanical Engineering
Research group: Energy Technology

Student: X.Y. Zzzzzzzz
Identity number: 0123456
Thesis supervisor: C.C.M. Rindt
Date: 11-08-2021

In the preparation phase of the graduation project the student formulates the objective of the study (based on the current state in literature and/or previous work), writes a research plan (containing the intended analytical/experimental/numerical methods and results) and presents a project planning (deliverables and timeline). This report is the end result of that.

So, the report contains at least the following topics:

- Background and already obtained results (at least 2 pages)
- Problem definition / research question
- Research plan (intended methods and results)
- Project planning (at least 6 and at maximum 8 months, timeline should correspond to start and end dates filled out on the 'registration forms for the project phase of the graduation project')
- Literature references (if needed)

An example of the report lay-out is given below.

- The student is allowed to make changes to this format.
- Please delete the text above when using this document to write the report.

- 1. Background of the project (at least 2 pages)**
- 2. Problem definition and research question**
- 3. Research plan**
- 4. Project planning (at least 6 and at maximum 8 months)
(Also include the preparation phase planning)**
- 5. Bibliography**
