

**Are you an enthusiastic, creative EU student? And are you looking for a place where you can further explore and develop your ideas?**

- StudiOMOM LAB is part of studioMOM. It is a hybrid learning environment in which you combine experimental learning and design practice. In the LAB, we make room for research topics that are relevant to studioMOM. This means that we experiment with materials, shapes and techniques by means of tests, desk research and making sketches.
- At StudiOMOM LAB, we have a new internship every six months. Besides your lab work, you will also support our CMF (Color, Material, Finish) and Product design team. Your internship starts either on September 1st or February 1st and it lasts about 6 months.
- Unfortunately, due to legislation, it is only possible to submit an internship application for students from the EU.
