+	+	+	+ + + + + + + + + + + + + + + + + + + +
+	+	+	About the challenge owner + + + + + + + + + + + + + + +
+	+	+	SAYF's vision is to facilitate youth engagement within the aviation industry as it $+$ $+$
+	+	+	is going through a major transformation. The path towards a more sustainable sector is a complex one that should involve youth as much as other types of the transformation.
+	+	+	actors. The Foundation will therefore allow youth to be part of this + + + + + +
+	+	+	transformation by raising their voices and giving them a spot at the decision-
+	+	+	professional journey by sharing opportunities and knowledge on specific fields + + +
+	+	+	of expertise. The overall goal is therefore to make sure youth voices matter and + + +
+	+	+	+ + + + + + + + + + + + + + + + + + +
+	+	+	Challenge description + + + + + + + + + + + + + + + + + + +
+	+	+	Please describe the challenge in sufficient detail to allow evaluators at + + + + +
			academic departments to estimate whether their students can contribute to it.
+	+	+	The students are challenged to ideate and develop a disruptive start-up in the + + +
+	+	+	aviation industry. This could potentially be prompted by the ideation of a + + + +
+	+	+	sustainable (zero-emission) airline (whatever it takes) which relies on the + + + +
			currently available sustainable technologies but may also be changed
+	+	+	throughout the course to any subject that interfaces with the development of a^+ + +
+	+	+	sustainable airline. If the students ideate an incredible idea outside of the scope+ + +
+	+	+	of a sustainable airline, for example, a new disruptive sustainable technology, or
1			a disruptive environmental tool that can be connected to a viable business
+	+	+	case,+we will gladly support the students to pursue such interests. + + + + + + +
+	+	+	What is the overall goal you aim to achieve?
+	+	+	-For students to evaluate the current sustainable technologies related to $+$ + + +
+	+	+	qviation. + + + + + + + + + + + + + + + + + + +
+	+	+	- To reach out to all relevant stakeholder for a sustainable alriine.
			-Design and user test a business plan.
+	+	+	-Develop tools for stakenolders to convince the value of sustainable airlines to + + +
+	+	+	their business. (Calculations regarding emissions, and costs benefits for an
+	+	+	-Promote their sustainable via our existing network, and the one they have + + + +
+	+	+	developed throughout this course. + + + + + + + + + + + + + + + + + + +
+	+	+	What are possible components you see fitting in the work of the project group? $+$ +
+	+	+	-There are many aspects relating to the evaluation of the plethora of
			technologies that are available for the aviation industry at this moment.
+	+	+	Furthermore, the development of emission tools for stakeholders (e.g., airports) + + +
+	+	+	and aircraft QEMs) to convince that the technology, chosen by the students, is
+	+	+	environmentally and financially beneficial. These tools can be implemented in
1	1	1	websites for example (which could even be an independent start-up idea, that
