Computer Science Graduate Program
Program Guide 2023–2024
For master programs CSE, DS&AI, ES, IST, EIT, BDMA, and for pre-master programs

Computer Science and Engineering
Data Science and Artificial Intelligence
Embedded Systems
Information Security Technology
EIT Embedded Systems
EIT Data Science
Erasmus Mundus Joint Master Degree: Big Data Management and Analytics

This document is made for student reference. For official regulations, the Program and Examination Regulations (see Appendix A) are always leading.

Editors: A. Lammen, S. Linskens, K. MacLeod, J. Verbeeten
Version: 1.3
Timeline of the Master Program

At the start of your Master:

1. Attend the Master kickoff (August 21-25, 29. August 18 is Welcome Day for international students)
2. Register for courses before the Quarter 1 (Q1) course registration deadline on August 27.
   a. Tip: A full-time study load is 3 courses per quarter (15 ECTS). Choose your Q1 courses based on
      the information in the chapter of your master program, and the advice you got from the academic
      advisor via email. Furthermore, it is advised to start with foundational/mandatory courses, and
      homologation courses (if required).

During your Master:

3. Make a plan for your studies:
   a. Meet with your academic mentor. In Q1, you will be matched with an academic mentor (a
      professor in the department). Your mentor will contact you to schedule a first meeting. It is
      recommended to discuss your academic interests with your mentor so they can advise on your
      course planning.
   b. Questions about curriculum, planning/timing, regulations, or university services? Contact the
      academic advisor (section 10.3)
   c. Do you want to go abroad for courses or internship? Ideally, you should start organizing this at
      least 6 months before you would like to go (section 1.6.4)
   d. Turn in your Program of Examinations (also called Study program form). This lists all the courses
      you plan to take as part of your degree. It is recommended to do this in Q3 of your first year
      (section 1.6.1). It is recommended to discuss your elective choices with your mentor or a
      representative from the research group in which you want to graduate (section 9).
4. Watch out for regular announcements about your program: you will be registered for the Canvas course
   2CSE000, 2ES000, or 2AMC99 (for CSE students, ES students, and DSAI students, respectively). Announcements about the program will be posted there. Contact your academic advisor if you haven’t been added to the Canvas page in week 3.
5. Participate in SCOP/e activities throughout first year. See section 1.7.
6. Do your graduation phase (worth 40 ECTS). It is made of 2 parts (Note: EIT students have 1 part worth
   only 30 ECTS; they have no preparation phase.)
   a. Start the preparation phase (10 ECTS), usually in Q2 of your second year. You need to fill out the
      matching survey in order to find a project (Section 1.8.1). You need to obtain permission to start
      your preparation phase by turning in the Preparation phase form.
   b. After you defend the Preparation Phase, start the graduation project (30 ECTS). You need to have
      completed all courses and have passed preparation phase to be allowed to request to start. Then
      you turn in the Graduation Plan form. You can request to start with up to 12 ECTS of your master
      program incomplete. This should be discussed with the academic advisor in advance (section 10.3)

As you approach the end of your Graduation Project:

7. Plan the date of your thesis defense ≥ 4 weeks in advance. If you are planning to defend in July or August,
   it is recommended to start scheduling this 6-8 weeks in advance (if possible) to avoid potential scheduling
   conflicts with professors during the summer holidays.
8. Ensure your assessment committee has been composed. See the graduation checklist page of your master
    program on the Education Guide website for details about this.
9. Register for an Examination Committee meeting at least four weeks in advance via OSIRIS (see Section 1.9).
   The one you register for should take place at least two weeks after your thesis defense. (Note: Students are
   not present during this meeting. This is the meeting where the university checks that you meet graduation
   requirements. Registering for it puts you on the list of students to be checked.)
10. Attend the graduation ceremony (You can check the dates on the education guide). You will get an email
    with the invitation from the student administration.

Part I: General Information
1

Studying in the Computer Science Graduate Program

The Department of Mathematics and Computer Science (W&I) at the Eindhoven University of Technology (TU/e) offers undergraduate (Bachelor of Science), graduate (Master of Science) and postgraduate (PhD, EngD) courses in Computer Science, Data Science and Applied Mathematics.

The CS domain offers its graduate and postgraduate courses in the Computer Science Graduate Program. There are two master programs:

- Computer Science and Engineering (CSE). This master program has a track on Information Security Technology (IST), an interdisciplinary variant in cooperation with the Mathematics Division of the TU/e.
- Embedded Systems (ES), an interdisciplinary master program in cooperation with the Department of Electrical Engineering (EE). This program has an EIT Digital Embedded Systems track.

The DS domain offers one master program:

- Data Science and Artificial Intelligence (DSAI). This master program is grounded in two scientific disciplines: data science and artificial intelligence.
- Furthermore, this program has an EIT Digital Data Science track and hosts a Big Data Management and Analytics Erasmus Joint Master Degree.

The two postgraduate programs are:

- Software Technology, a Master of Technological Design (EngD) program,
- The PhD program.

1.1 Structure of the Master programs

All master programs comprise two years of study or 120 credit points (EC); a credit point is equivalent to approximately 28 hours of study and homework for an average student. Most courses are standardized to 5 credit points per course.

The two years of course work and practical training are divided into four parts, consisting of:

1. Mandatory or Foundational courses to create a sufficient layer of theory and general or program-related knowledge.
2. Specialization and/or elective courses. Depending on a student’s interests, there may be a longer or shorter list of electives. These can also be used to prepare for the graduation project. In addition, there is room for free electives.
3. (optional) International experience and or internship. Students who do not have any international experience (a degree from another country or at least 15 EC of credits from a
university outside the Netherlands) are encouraged to take courses abroad or to do an internship abroad (Section 1.6.4). Note that international experience is not required.

4. Master project and thesis to be spent on a specialist topic of theoretical or practical nature. It should always address an open research question. This part presents the opportunity to show your independent engineering and academic skills in research and design. (International experience can also be gained by doing the master project abroad.)

1.2 Academic calendar and examination schedules

Each academic year is divided into two semesters (September to January and February to July). Each semester consists of two quarters (quartiles). There are four quarters each academic year, consisting of eight weeks of lectures followed by an examination period of two weeks. Details can be found in the Academic Year agenda in the education guide.

</table>

1.3 On-campus availability requirement

You are expected to be available and present during all weeks with classes and weeks with exams. Some courses may have activities planned during the exam weeks, not yet scheduled before the course starts. Staying in a different city/country during weeks with classes or with exams is not a valid reason for missing an activity.

1.4 Course and exam registration

Students must register themselves for courses. This is done on OSIRIS. Participation in a course is only possible if you have registered for the course via OSIRIS. Students who wish to de-register from a course should do so on Osiris before the start of the quarter. Questions about course registration and de-registration can be directed to ESA Helpdesk at ESAhelpdesk@tue.nl.

Please note that the course you register for determines the regulations you must follow. If you take a Bachelor College course, Bachelor College regulations apply (even if you are a Graduate School student). This rule is of particular importance for pre-master students as well as students with prescribed or recommended homologation courses. You should consult OSIRIS and check whether the course you intend to take is a Bachelor College course or a Graduate School course. Please keep in mind that students who want to take (a) Bachelor College course(s) as part of the master program, that have not been prescribed/recommended upon admission, should submit a motivated request to the examination committee.
Registration for a course does not always mean automatic registration for the exam. You should always double-check that you are registered for your exams before the exam registration deadline. For courses that are evaluated through assignments, you do not need to register for the exam as there is no exam.

Students at TU/e have two opportunities per year to take an exam for a course. The first is during the examination period of the quarter in which the course was offered. At the end of the following quarter, students who did not pass the first attempt of the exam, or who would like to try to improve the grade they got, can register for another attempt at the exam. This is called a re-sit exam. **Master students must register themselves for re-sit exams.** Details can be found in the regulations (Appendix A)

### 1.5 Individual support: Advising and Mentoring

The university offers many kinds of support for students. There are two main staff members who you can approach for individual support within the department: the academic advisor and your academic mentor. On a university level, there are other coaches and advisors, which are described in more detail below.

Note that the academic advisors and mentors will not make academic decisions for you; it is your responsibility as a student to design your own program. However, they are glad to guide you along the way and answer your questions.

#### 1.5.1 Academic Advising

The academic advisor is a non-academic staff member who knows the details of your program’s curriculum and how the regulations apply to various situations. They can also tell you about the diverse array of resources offered to students at our university. You can approach your academic advisor with questions about study planning, but also with other topics. For example, if you have a personal issue that is affecting your studies, or simply can’t figure out where to start with a question, you can contact the academic advisor (see section 10.3). They will either help you themselves or refer you to another staff member when necessary.

#### 1.5.2 Mentoring

Your Academic Staff Mentor is an academic staff member who is an expert in the field you study. Within the first few weeks of your master program, a mentor will be assigned to you (note, this is not the same as the Student Mentor who you may have met at the Master Kick-off). Your academic mentor can advise you on things like choosing your first electives based on your interests, career development, and your specialization within the master program.

#### 1.5.3 University-wide student support

Central Education and Student Affairs (ESA) also offers a variety of services for students who need more support. There are different types of guidance or counsellors who help on different topics, as well as digital resources and group trainings. Some of the support people and programs are:

- Student psychologists (these are psychologists for students, not students training to be psychologists)
- Study management advisors
- Student counsellors (Studentendecanen)
• Confidential counsellors
• Career Academy
• And others…

There is also a wellbeing platform, as well as group training sessions. These group trainings are on topics like procrastination, fear of failure, setting goals for your studies, etc. You can find plenty of details about these services, and other support, on the Student Guidance page of the Education Guide.

1.5.4 Extra support during your studies, or studying with an impairment
The university offers resources to students who need extra support with their studies. For example, students who are studying with ASD, AD(H)D, or other mental or physical impairments, but also students who are pregnant, caring for children or family members, or students who have TopSport status. The resources and support options are detailed on the education guide page called “Extra support during your studies”. You can even already indicate that you need extra support when you register for the master program on Studielink. Note that if a student needs special exam facilities these need to be arranged many weeks in advance, so it is good to start as soon as possible.

Questions can be directed to your academic advisor (section 10.3) or the student counsellors (section 1.5.3)

1.6 Designing your study program: choosing courses, etc.
Students are responsible for designing their own study program. “Designing a study program” includes selecting courses according to the curriculum of your master program (see Part II), mindfully choosing electives, and choosing a specialization topic for the graduation project. (Note that a study program is referred to as an “individual program of examinations”.) In the rest of this section you can find guidelines to help you with the process.

1.6.1 Approval of your courses: Individual Program of Examinations
You have some freedom when it comes to which courses and electives to choose. The courses you choose must be approved; each student is responsible for designing their own study program, filling out the Individual Program of Examinations (IPE), and submitting it for approval. The Individual Program of Examinations form is available on your program’s pages of the Education Guide. You will be notified when your form has been approved.

It is highly recommended to turn in the form by the end of Q3 of your first year of studies. This way, you can be sure you are taking appropriate courses, and the department knows which research group you are interested in graduating in, thus ensuring sufficient supervising capacity for the graduation projects. You can make changes to your Individual Program of Examinations later if necessary.

Use the curriculum described in the chapter about your program to guide your choices. Please note that the PlanApp is currently not used for the Master programs. If there are questions, you can ask your academic advisor (section 10.3) or your academic staff Mentor (section 1.5.2).

1.6.2 Admission with deficiencies: homologation courses
It is possible for students with varied academic backgrounds to be admitted with small academic deficiencies. In this case, the admission committee will point this out and assign (a) bachelor-level course(s) at TU/e to the student to make up the deficiencies. These are called homologation courses.
The admission committee will inform the student which homologation courses they must take, if any, in the student’s admission letter. Assigned homologation courses must be completed before starting the preparation phase of the graduation project (section 1.8).

Assigned homologation courses are a required part of the student’s academic program, except for students in the Embedded Systems program. For Embedded Systems students, the homologation courses are just recommended and not required. Embedded Systems students can refer to the related section (section 5.1.6) to learn more about the homologation recommendation tool.

If you were assigned a homologation course, but you think one of your bachelor courses already sufficiently covered the topic, you are allowed to request to be exempted from the homologation course within 6 weeks after receiving your admission letter. The process is described in this letter.

1.6.3 Courses at another university
In addition to taking courses at TU/e, students can follow courses offered by other universities.

In general, any Master-level course offered at any Dutch university could count towards a student’s Master degree, as long as it approved by the Examination Committee. You can get this approval by including the course in your Individual Program of Examinations form and including a link to the course description in the host university’s course catalogue (section 1.6.1). Note that the course should not have content overlap with other courses you are taking for your degree. It is highly recommended that you seek this approval before taking the course, to avoid taking a course that is not approved.

There are also more streamlined ways to register for courses at other Dutch universities: if you register for a course via EUWW, the background administration is taken care of for you. There is also the EuroTeq program, where you can register for a course at a partner university in another European country. Most EuroTeq courses are online courses. For more information on EUWW and EuroTeq, look online.

When choosing a EUWW or EuroTeq course, it’s important that the content does not overlap with the content of other courses in your program, and that the course and exam scheduling do not conflict with other courses you take. It is recommended to get approval for the course before you take it, so that you can be sure it will count toward your degree. You can get approval by including it in your Individual Program of Examinations form.

1.6.4 International experience
Students who do not have a degree or certificate(s) from a university in another country are encouraged (but not required) by the Graduate School to gain international experience during their Master study. Several options are available:

■ Take subjects at a university abroad (at least 15 EC)
■ Do an internship abroad (at least 15 EC, which is roughly 3 months)
■ Do (a part of) the graduation project abroad

Procedures related to obtaining international experience are further detailed on the education guide. (tip: google “international experience tue education guide” for the best link). This includes information about grants and scholarships.
Organizing your stay abroad requires careful planning. It is therefore essential that you contact the following offices as early as possible. They will help you make sure you don’t miss any steps preparing your international experience:

- Your academic advisor (section 10.3)
- The department’s exchange officer: MCS.Exchange@tue.nl

Going abroad is not a valid reason for missing mandatory courses or homologation courses. If you need help, the academic advisor can help you with this academic planning, and either the academic advisor or the department’s exchange coordinator can help you find out if the courses you want to take abroad fit into your master program.

### 1.6.5 Internship or company experience

An internship (15 ECTS) may be chosen as part of your Master program. It is optional and not a required part of the program. An internship can be carried out in academia or in industry, in the Netherlands or abroad. The objective is to gain experience in your future work field. Please note that this experience can also be gained during your graduation project.

An internship is supervised by an academic staff member at TU/e, called an internship supervisor. This ensures that the internship meets academic criteria. A student has the opportunity to find their own internship and their own internship supervisor; they are not provided to you by the department. We strongly advise that you contact a supervisor at TU/e before you contact a company.

In addition to finding an internship supervisor, the student must also have the internship approved via the Internship Plan form. This can be found on the Education Guide page of your master program. The student should attach a brief description of the internship and a motivation to the Internship Plan form.

Questions about the process of doing an internship can be directed to the academic advisor or your mentor.

**Students should note that it is not allowed to do both an internship and the graduation phase (section 1.8) in a company. If one is in a company, the other would need to be at TU/e or another educational research institution. A student’s internship and graduation phase should not have the same supervisor.**

**Internship Rules and Regulations:**

- The study load is 15 ECTS, corresponding to ca 420 hours of study
- The Internship should fit in the study program, and it should contribute to the learning outcomes of the Master’s degree program
- Approval for the internship is requested via the Internship Plan form. This must be submitted before the internship starts.
- The Internship can be done externally (at a company or other university) or internally (at TU/e)
  - Internship and graduation cannot both be done in industry. This means that if you do an internship with an external company, your graduation project needs to be done at TU/e.
The internship supervisor and graduation supervisor must be different; a student’s internship supervisor cannot be the same person as their graduation phase supervisor.

- A student’s internship and graduation phase must be on distinct topics.

### 1.7 SCOP/e

SCOP/e stands for Study and Career Orientation Program @TU Eindhoven. This program was designed to guide students in making their study and career choices during their studies at TU/e. Participation in SCOP/e is mandatory.

The program consists of 2 distinctive parts:

- An administrative part
- An activities part

The administrative part supports you as a student in taking all the necessary steps to choose your study program, your supervisor and your graduation project. The activities part ensures you have all the information you need to make these choices. It consists of cluster overview presentations, workshops and colloquia. Participation in both parts of SCOP/e is mandatory. You need to complete SCOP/e before starting your graduation project. More information can be found on Canvas page 2IMR10.

### 1.8 Graduation Phase: Preparation phase + Graduation project

At the end of your studies, you will do the graduation phase. This is the final part of your master’s degree. It is made up of two parts: first you do the preparation phase (worth 10 ECTS) and then the graduation project (worth 30 ECTS). (Note: Some people informally call the graduation phase the master thesis or master project.)

You are allowed to do the graduation phase at TU/e, in another university or research institution, or at a company. It can be in the Netherlands or abroad. In all cases, you still need a supervisor from TU/e. If you did the 15 ECTS internship as part of your master program, and it was at a company, you must do the graduation project at TU/e or another university or research institution. The internship supervisor cannot be the same person as the graduation supervisor.

There are certain requirements that you need to meet before starting the preparation phase or the graduation project. They are listed below. Please read them carefully.

#### 1.8.1 Planning and starting the graduation phase

During your graduation phase, you do a research project. In order to prepare for this, there is a “preparation phase” worth 10 ECTS. This consists of a literature review and thoroughly defining the research question that you will work to answer during the rest of your project. This is described in further detail below.

All students should also look at the Graduation Checklist on the Education Guide website to make sure they follow the correct administrative steps.

Before starting the preparation phase:

- Fill out matching survey. You get allocated to a research group after you submit the matching survey. This survey will be available for you when it is time to fill it out. You

---

1 EIT and students do not have a preparation phase. This is also true for students who follow the curriculum from Academic year 2020 or earlier.
should fill out the matching survey at least one full quartile before your planned start date for the preparation phase.

- If you were assigned any homologation courses when you were admitted (section 1.6.2), they must be passed.
- Turn in the Preparation Phase form, which is available on the Education Guide website. This form is used by the department to make sure that you meet the requirements to start the preparation phase, and check other details.

Timing: Typically, you do the preparation phase in the quartile before you start your 30 ECTS graduation project. It is allowed to start slightly earlier by spreading the 10 EC over two quartiles. Note that neither the preparation phase nor the graduation project need to start at the beginning of a quarter, or end at the end of a quarter; the exact timing is flexible. This is to be discussed with and agreed on with your graduation supervisor. In any case, the preparation phase should end when you plan to start the graduation project (30 ECTS).

**During the preparation phase:**

The preparation phase is an individual project of 10 credits supervised by your graduation supervisor and its objective is to define a concrete graduation project. Together with your supervisor, you decide on your topic and a global planning for the preparation phase and your graduation project. During the Preparation phase, you create:

- a precisely defined problem statement,
- an analysis of the state-of-the-art including a thorough literature survey,
- define the expected end result,
- an outline of the planned research and development approach (possibly already supported by some initial theoretical analyses, a small example or case study, and/or some initial experiments),
- a project planning with clearly defined milestones (decision points) and deliverables (results).

**At the end of the preparation phase:**

You present the project proposal report to the intended assessment committee that will also evaluate the graduation project.

The purpose of this preparation phase is to ensure that you can begin your graduation project with a well-defined research problem that is feasible to solve in the given context, particularly regarding the availability of required data, context information, and stakeholder objectives.

There are three possible conclusions: you pass the preparation phase and continue with the same project for the graduation project; you pass the preparation phase but must find a different graduation project; you fail the preparation phase, and need to do a new preparation phase on a different topic with a different supervisor.

**1.8.2 During the Graduation project**

After you successfully completed your preparation phase you can begin your graduation project (30 ECTS). You need to submit the Graduation Plan form for approval on time. This is available on the Education Guide website.
During the preparation phase you already developed the graduation topic and a project planning together with your supervisor. You now also arrange the supervision method, including how often you and your supervisor will meet to discuss progress.

In general, the graduation project should be completed within 6 months from the start. However, students who work on the project full-time are allowed up to 9 months to finish the graduation project. (This time period refers only the graduation project portion of the graduation phase; it does not include the time you spend on the preparation phase.) The minimum duration of the project is 4 months. You are not allowed to defend your thesis until 4 months after the defense date of your preparation phase.

1.8.3 Final presentation and thesis defense
The final component of your master program is the final presentation and thesis defense. You must finish all courses and other study components before you defend the thesis. You can discuss arrangements for scheduling the defense with your supervisor as you approach the end of the project.

You complete your graduation project by writing a report about your project and giving a public final presentation. The defense following the presentation, however, is not public; only the student and the assessment committee are present.

You will also need to register for an examination committee meeting after your defense. This is not a meeting that the student attends. Rather, it is the meeting in which the examination committee checks if you have met all requirements to graduate. You can find details about this and finishing your thesis in the Graduation Checklist on the Education Guide website.

1.8.4 Confidentiality
If a student does their master thesis in collaboration with a company, sometimes the company asks the student to sign an NDA or an extensive confidentiality agreement. Students should keep in mind that they must write a master thesis, which cannot be confidential forever. Details about confidentiality agreements can be found on the Education Guide. If you have further questions, reach out to the academic advisor.

1.8.5 Plagiarism and the thesis
The university takes scientific integrity seriously. During your studies, you will sign the Code of Scientific Conduct. Part of what you agree to in that document is to not commit plagiarism (e.g., taking credit for material that is not your own) or scientific fraud (e.g., fabricating data). You can read more about this, and the consequences for committing fraud in section 1.13.1.

1.9 After the project
See the Graduation checklist page of your program on the Education Guide website for an overview of the steps to be taken toward the end of your project and after your project.

1.10 Honors Program
Two different honors programs are available for excellent students: Research CS Honors and Honors Academy. Students of all Master programs offered by the Computer Science division can apply. Both honors programs are extracurricular, i.e., done on top of the regular Master program.
That is, the credits obtained do not count towards the 120 credits you need to accumulate for your Master program.

More information about the honors programs can be read below or obtained from the honors programs’ coordinators: dr. Kevin Verbeek (k.a.b.verbeek@tue.nl) and for DS&AI, dr. Vlado Menkovski (v.menkovski@tue.nl), or about the Honors Academy at honorsacademy@tue.nl. See also the “honors program” page of the Education Guide website.

1.10.1 CS Research Honors

The goal of the program is to give excellent students the opportunity to participate in and contribute to the research being done in the department. Concretely, the Honors program consists of:

- Two projects of 6 ECTS each, one in the third and fourth quartiles of the first year of the Master program and another one in the first and second quartiles of the second year. These projects can be research-oriented or design-oriented and are done in different research groups in the department. The exact content of the projects is determined by the supervisor of the research group where the project is done, in consultation with the student. The expected outcome of the project is a paper (published as a technical report of the department, and possibly also elsewhere).

- Beside the projects, the student participates in other activities of the research group (for example in research seminars) and is encouraged to participate in activities organized by one of the national Dutch research schools (ASCI, IPA, or SIKS). The latter activities are typically short courses or conferences.

Students who successfully complete the Honors program will receive a certificate upon graduation. Participating in the Honors program is especially useful if you are interested in doing a PhD later on, since it allows you to experience what it is like to do research in two different areas. But above all, the Honors program is challenging and fun.

The program is aimed at highly motivated excellent students (among the top 10% of the Master students in the department) who had outstanding grades in their Bachelor programs and scored high grades during the first semester of the Master program (average at least 8). For admission to the honors program, an application procedure applies.

1.10.2 Honors Academy

Honors Academy is a university-wide program. It consists of two interrelated components: personal leadership development (5 EC) and professional development (15 EC). Activities related to the personal leadership component target students of all master programs and are organized by the Graduate School. Professional development activities might be related to ‘excellence for science’, ‘excellence for industry’ and ‘excellence for society’. Examples of such activities can be international or industrial internships, taking courses at other universities or designing a business plan.

You can apply by submitting an application letter to the honors programs’ coordinators: dr. Kevin Verbeek (k.a.b.verbeek@tue.nl), and for DS&AI, dr. Vlado Menkovski (v.menkovski@tue.nl). In this letter you should motivate why you want to join the honors academy and what makes you an excellent candidate for the professional development as well as personal leadership part. You need to enclose two appendices: (1) evidence of your past performance and (2) a tentative plan for your professional development: what do you want to achieve and how?
1.11 Double degree program CSE and SEC
The qualification to teach to senior secondary school pupils in the Netherlands is coupled to the 3TU master program Science Education and Communication (SEC). This program encompasses 120 credits. In Eindhoven it is offered by the Eindhoven School of Education (ESoE). In the Education track of the SEC program, a student specializes in one of four disciplines: math, physics, chemistry, or computer science. Please note that the SEC program is completely lectured in Dutch.

Details about the curriculum are available at the ESoE website: [http://www.tue.nl/esoe/](http://www.tue.nl/esoe/).

1.12 Quality assurance & Course surveys
After each quarter, students are asked to fill out a course survey for each course they participated in. It is of vital importance that students participate since only questionnaires with a sufficient number of respondents are taken into consideration.

The students’ responses are anonymous and are taken seriously by program management; they are discussed first by the Quality Assurance Officer with the Program Management and later by the Program Committee. Lecturers are asked to read and respond to their course’s evaluation as well. Positive course evaluations can help the program understand what teaching practices are beneficial. If a course has particularly negative evaluations, the lecturer should create an improvement plan with their supervisor.

Students can also give constructive feedback in roundtable discussions about specific courses, via the education officer of their Study Association Pattern or GEWIS, or directly to the lecturer of the course.

The opinion of students on the quality of the graduation phase is gathered by means of a graduation questionnaire, which is filled in after the assessment of the graduation project. These are collected and aggregated once a year. The results are discussed both in the Program management and the Examination committee.

1.13 Rules and regulations
Master programs of the department are subject to the following rules and regulations:

- Program and Examination Regulations. This is a legal document describing the master program. Topics covered include admission, structure of the program, testing and final examinations, study counseling and transitional arrangements. (Appendix A)
- Regulations of the Examination Committee. Topics covered include exams, fraud, graduation, and internship.
- Directive Double Diplomas. These are the regulations for students doing a double degree.

The aforementioned documents can be found on the Education Guide pages of the master programs.
1.13.1 Academic honesty

Everyone involved in education and research at TU/e bears personal responsibility for observing and maintaining scientific integrity. At TU/e we require strict compliance with the overall principles of professional scientific conduct in all cases. TU/e has its own Code of Scientific Conduct. Please read the code of conduct very carefully: you will be required to sign a declaration stating that you have read it. Carrying out research, design and educational activities, you shall observe the five central values of scientific integrity, namely: trustworthiness, intellectual honesty, openness, independence and societal responsibility, as well as the norms and principles which follow from them.

A particular kind of integrity violation is academic fraud. Fraud includes any behavior or negligence on part of the student that makes it impossible for an examiner to form a correct judgement of the student’s knowledge, insight, and skills, or that is aimed at intentionally manipulating the examination process. Examples of fraud include identity fraud (e.g., when a student offers their work to others with the aim, knowledge, or expectation that this work be submitted it as the other student’s own work), exam fraud (e.g., using not-allowed materials during an exam), plagiarism (e.g., taking credit for material that is not your own) and scientific fraud (e.g., fabricating data).

In cases of fraud, sanctions may be imposed not only on the perpetrator but also on others who are complicit in the fraud. Examples of possible sanctions in case of fraud are denying the student the right to take one or more examinations during a period up to one year or termination of the student’s enrollment.

The Learning Outcomes for each master program or master track are described in the Program and Examination Regulations.
Pre-Master Programs

Pre-master programs are designed as a bridging program for HBO students who want to study a university-level Master. Sometimes they are also followed by students with a deviating WO-level bachelor. Successful completion of the pre-master program grants admission to the corresponding master program.²

2.1 Study Progress Requirement
The pre-master programs have only one starting moment (September). The pre-master must be completed within one academic year. This is called the Study Progress Requirement (SPR). If a student does not complete the pre-master in one academic year, they will get a negative advice for the SPR. That means they will not be able to repeat the pre-master, or participate in the related Master program, for three years.

Students who think they will not be able to complete their pre-master courses within one academic year should contact the academic advisor (section 10.3) as soon as possible. Depending on the circumstances, the student may be advised to unenroll from the pre-master. In very exceptional circumstances, they maybe be able to get an extension on the SPR.

2.2 Courses during Pre-Master
Most pre-master students follow a standard curriculum, which can be found later in this chapter. Some pre-master programs have a different curriculum depending on the student’s prior education. The curriculum the student should follow would then be indicated in the student’s admission letter. If a student has an individualized curriculum, that is also mentioned in their admission letter.

Usually, pre-master students only take courses that are part of their pre-master. However, students that have successfully completed a large part of their pre-master program during the first half-year of their studies, and who would be at a demonstrable disadvantage if they were required to wait for the completion of the pre-master prior to joining the master program, can apply for a special permission of the Examination Committee to follow master study’s components. Before requesting this from the Examination Committee, the student must first discuss with the academic advisor (section 10.3). The academic advisor will advise the student on their options and help them submit the request.

These are the requirements and steps:

- This idea should be discussed with the academic advisor in advance.
- Students following a 30 EC pre-master program that can be followed within one semester are not eligible.

² Note that completing the Pre-master does not grant admission to international programs like EIT Embedded Systems, EIT Data Science, Erasmus Joint Master Degree: Big Data Management and Analytics
- Maximum of 15 EC of master study’s components can be approved.
- The eligible courses have to be determined in advance.
- Please note that the course you register for determines the regulations you have to follow (see section 1.4). You should consult OSIRIS and check whether the course you intend to take is a Bachelor College course or a Graduate School course.

### 2.3 Computer Science and Engineering

The pre-master program for a student with a completed polytechnic program in computer science totals to 30 EC and consists of the following units:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course Code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2WBB0</td>
<td>Calculus variant 2</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IT60</td>
<td>Logic and set theory</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IHA10</td>
<td>Formal algorithm analysis for premaster</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2ITS90</td>
<td>Automata, language theory and complexity</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2ID50</td>
<td>Data modeling and databases</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2DRR00</td>
<td>Linear algebra and applications</td>
<td>5</td>
</tr>
</tbody>
</table>

It is also recommended to follow 2WF90 Algebra for security in Quarter 1.

### 2.4 Information Security Technology

The pre-master program for a student with a completed polytechnic program in computer science totals to 25 EC and consists of the following units:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course Code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2WBB0</td>
<td>Calculus variant 2</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IT60</td>
<td>Logic and set theory</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IHA10</td>
<td>Formal algorithm analysis for premaster</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2ITS90</td>
<td>Introduction to cryptology</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2IC80</td>
<td>Lab on offensive computer security</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2IC60</td>
<td>Computer networks and security</td>
<td>5</td>
</tr>
</tbody>
</table>

### 2.5 Embedded Systems

The pre-master program for a student with a completed polytechnic program in computer science or similar totals to 30 EC and consists of the following units:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course Code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2DL10</td>
<td>Premaster calculus and probability</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>5EPC0</td>
<td>Circuits</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IT60</td>
<td>Logic and set theory</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>5LIU0</td>
<td>Premaster Linear systems, signals &amp; control</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2DBI00</td>
<td>Linear algebra and applications</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>5XIE0</td>
<td>Computational modeling</td>
<td>5</td>
</tr>
</tbody>
</table>

The pre-master program for a student with a completed polytechnic program in electrical engineering or similar totals to 30 EC and consists of the following units:
### 2.6 Data Science and Artificial Intelligence

The pre-master program for a student with prior knowledge in Linear Algebra totals 30 EC and consists of the following units:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course Code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2IH10</td>
<td>Formal Algorithm Analysis for premaster</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IT60</td>
<td>Logic and set theory</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2DI90</td>
<td>Probability and statistics&lt;sup&gt;3&lt;/sup&gt;</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2IIG0</td>
<td>Data mining and machine learning</td>
<td>5</td>
</tr>
<tr>
<td>2 or 3</td>
<td>2ID50</td>
<td>Data modelling and databases</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>or JBI050</td>
<td>or Data management for data analytics</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>JBI100</td>
<td>Visualization</td>
<td>5</td>
</tr>
</tbody>
</table>

The pre-master program for a student with prior knowledge in Probability and Statistics totals 30 EC and consists of the following units:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course Code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2MBA20</td>
<td>Linear Algebra 1</td>
<td>5</td>

<tr>
<td>2</td>
<td>JBI100</td>
<td>Visualization</td>
<td>5</td>
</tr>
<tr>
<td>2 or 3</td>
<td>2ID50</td>
<td>Data modelling and databases</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>or JBI050</td>
<td>or Data management for data analytics</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>2IL50</td>
<td>Data Structures</td>
<td>5</td>
</tr>
</tbody>
</table>

<sup>3</sup> If this course causes a schedule conflict in Q1, contact the academic advisor about alternatives.
Part II: Master Programs
Computer Science in Engineering

The CSE Master program is a research-oriented master on Computer Science and Engineering, to which all clusters in the Computer Science and Data Science domains of the Department of Mathematics and Computer Science contribute by means of courses and graduation assignments. The CSE curriculum consists of a broad range of advanced courses offered by the researchers within these clusters. The courses span a broad range of the following topics: algorithms, databases, formal methods, internet of things, data mining and machine learning, artificial intelligence, process analytics, security, (embedded) software engineering, system and software architecture, and visualization.

3.1 Curriculum
The CSE Master curriculum is structured according to three focus areas: Algorithms & Theory, Architecture & Systems, and Software & Analytics. Each of these focus areas is captured by a set of foundational courses and deepening courses. These focus areas are described later in this chapter.

You obtain breadth in research by selecting a foundational course from each focus area and specialize in one of the focus areas by selecting additional foundational or deepening courses. In the second half of your studies, you participate in one of the research seminars, bringing you to the forefront of research in your chosen direction.

Specifically, the 120 EC of the CSE Master are allocated as follows. Further explanation is below the table.

<table>
<thead>
<tr>
<th>CSE curriculum component</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundational courses</td>
<td>15</td>
</tr>
<tr>
<td>Specialization (in one focus area)</td>
<td>15</td>
</tr>
<tr>
<td>CSE Specialization electives</td>
<td>30</td>
</tr>
<tr>
<td>Free electives</td>
<td>15</td>
</tr>
<tr>
<td>Seminar</td>
<td>5</td>
</tr>
<tr>
<td>Graduation Phase (preparation phase + graduation project)</td>
<td>10+30</td>
</tr>
</tbody>
</table>

**TOTAL** 120

To compose your study program, choose one foundational course from the focus area Algorithms & Theory, one foundational course from the focus area Architecture & Systems, and one foundational course from the focus area Software & Analytics (15 EC in total). That fulfills the “Foundational courses” part of the curriculum. In addition, choose three more courses (foundational or deepening) from one focus area (15 EC in total). That is the “Specialization (in one focus area)” portion of the program. The list of “CSE Specialization electives” is later in this chapter.
3.1.1 Focus areas
This section describes the foundational and deepening courses of each Focus area. You can use this information to choose your Foundational courses (15 ECTS) and Specialization (in one focus area) courses (15 ECTS).

**Algorithms & Theory**: A deep mathematical understanding of computation and semantics is indispensable for reasoning about the quality and efficiency of algorithms, data structures and (concurrent) systems. This focus area thus encompasses, for example, improving and understanding trade-offs between algorithm efficiency and quality, exploring, and pushing the limits of computation, modelling and (manually, mechanically or fully automatically) verifying computational and/or concurrent systems. The courses for Algorithms & Theory focus area are as follows:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundational</td>
<td>1</td>
<td>2IMA10</td>
<td>Advanced Algorithms</td>
</tr>
<tr>
<td>Foundational</td>
<td>1</td>
<td>2IMF25</td>
<td>Automated Reasoning</td>
</tr>
<tr>
<td>Foundational</td>
<td>4</td>
<td>2IMF10</td>
<td>Process Algebra</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>3</td>
<td>2IMA20</td>
<td>Algorithms for Geovisualization</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>2</td>
<td>2IMA15</td>
<td>Geometric Algorithms</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>2</td>
<td>2IMA35</td>
<td>Massively Parallel Algorithms</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>3</td>
<td>2IMA25</td>
<td>Exact Algorithms for NP-hard Problems</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>3</td>
<td>2IMF15</td>
<td>Proving with Computer Assistance</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>4</td>
<td>2IMA30</td>
<td>Topological Data Analysis</td>
</tr>
</tbody>
</table>

**Architecture & Systems**: Modern digital systems involve complex interactions between various hardware and software components operating under functional and non-functional requirements. This focus area addresses the understanding and management of the architecture, interactions, behavior, and trade-offs in such systems. In particular, it focuses on the theory and practice for the modeling, design, implementation, analysis and verification of complex networked, embedded, large-scale and data-intensive systems. The courses for Architecture & Systems focus area are as follows:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundational</td>
<td>1</td>
<td>2IMN10</td>
<td>Architecture of Distributed Systems</td>
</tr>
<tr>
<td>Foundational</td>
<td>1</td>
<td>2IMF30</td>
<td>System Validation</td>
</tr>
<tr>
<td>Foundational</td>
<td>2</td>
<td>2IMD10</td>
<td>Engineering of Data Systems</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>2</td>
<td>2IMF35</td>
<td>Algorithms for Model Checking</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>2</td>
<td>2IMN15</td>
<td>Internet of Things</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>2</td>
<td>2IMN20</td>
<td>Real-time Systems</td>
</tr>
<tr>
<td>Deepening courses</td>
<td>3</td>
<td>2IMN25</td>
<td>Quantitative evaluation of Cyber Physical Systems</td>
</tr>
</tbody>
</table>

**Software & Analytics**: Software is a key enabler in Computer Science. The development of software should be efficient and result in high-quality software. This focus area addresses the development of high-quality software in an efficient way. It does so by providing knowledge on developing
correct software by construction and by combining principles and methodology of software
development with analysis of information sources, specifically by mining software repositories to
understand the effects of software evolution. The courses for Software & Analytics focus area are as
follows:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundational</td>
<td></td>

<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2IMP20</td>
<td>Domain Specific Language Design</td>
<td>5</td>
</tr>
</tbody>
</table>

3.1.2 CSE Specialization electives

30 ECTS of your program are made of “CSE Specialization electives”. These can either be more
courses from any of the Focus area courses, or courses from the list below. Furthermore, it is also
possible to choose international experience courses or an internship for this section, subject to
relevance and approval by the Examination committee (section 1.6). This should be done in
advance. If you would like to request to use international experience courses as CSE specialization
electives, please discuss this with your academic advisor. More information about the internship
can be found in Part 1 of this document.

</tr>
</tbody>
</table>

1 Subject to approval and relevance. The student can only start an internship (2IMC10) with permission of the Examination Committee

Capita Selecta courses are occasional educational elements, often with a research flavor. They may
be experimental courses, a lecture series given by a visitor, or a special individual assignment as a
preparation on future research. The capita selecta can be followed only by permission of the responsible lecturer. Students do not have a “right” to do these courses, but they may be granted the possibility. When included, capita selecta courses are part of the CSE specialization electives. Further questions about the capita selecta can be directed to the academic advisor.

3.1.3 Free electives
To compose the 15 ECTS free electives part of your study program you can choose courses to broaden your horizon from:

- Other TU/e programs
- Other universities
- CSE or focus area foundation or deepening courses

In principle, all master courses offered at the TU/e can be chosen as free electives. Taking other mathematics and computer science related courses is recommended, as well as computer science related courses from other universities (provided their topics do not overlap with the TU/e courses you already take). You can also take EWUU, EuroTeq, or international exchange courses (see sections 1.6.3, 1.6.4 and 1.6.5). Remember that the courses you choose must be approved (section 1.6).

Note that if you have homologation courses (section 1.6.2), these are part of your free electives. It is also possible to include up to 15 ECTS of bachelor-level courses as part of your free electives. Note that any homologation courses contribute to this 15 ECTS maximum. If you want to take bachelor-level courses as part of your master’s degree, but they were not assigned to you as homologation courses, this should be discussed with your mentor and your academic advisor, and needs to be approved by the examination committee. It is recommended to request this approval well in advance of taking the bachelor course(s).

3.1.4 Seminar
CSE students are required to take a seminar. This is meant to help prepare you for the graduation project. Therefore, it is recommended to do the seminar in the field that you would like to do your graduation project in. Some research groups require you to have done their seminar to graduate with them, while others don’t. (A summary of the research groups in the department can be found on the Education Guide, see Chapter 9).

You should be in at least the 4th quarter of your master program before you take a seminar. Below you will find a list of seminars for CSE students.

<table>

[Table continued on next page]
### 3.1.5 Graduation Phase

The graduation phase is worth 40 ECTS. It is made of the preparation phase (10 ECTS) and the graduation project (30 ECTS). You do not need to register for the Preparation phase or Graduation Project in Osiris. (Note: Some people call the graduation phase or graduation project the “master project” or “master thesis”. This is mentioned here to avoid confusion.)

Students usually start the preparation phase in the 5th or 6th quarter of their studies, followed by the graduation project in the 7th and 8th quarters. The Preparation phase must be completed before the start of the graduation project. If homologation courses are chosen, then they must be completed before the start of the preparation phase.

Please see section 1.8 for details on the Graduation Phase.

### 3.2 Graduation Checklist

The Graduation Checklist page of the Education Guide website provides you with a step-by-step guide for the administrative requirements during your master program.
4
Information Security Technology

A Master of Science in Information Security Technology (IST) is an academic expert in the area of information security in general, and in computer & network security in particular. Information security technology protects data that are stored, transmitted, accessed, or modified against all kinds of threats. Threats can vary from unauthorized access to malicious manipulations. Information security technology is essential for secure communication and data protection in many situations.

A Master of Science in Information Security Technology can become involved in cryptographic primitives, security protocols, data storage, communication, or information security management. Additionally, they can act as internal or external consultant, regarding the security of information systems and networks, or regarding the security policy of an organization. A Master of Science in Information Security Technology can enter a job in (among others) the following institutions: research laboratories and academic institutes (both for theoretical and applied work); applied R&D in industry; the financial world; governmental agencies; consultancy agencies (all with respect to security in the area of information systems and relevant policy making).

After taking some courses, you will probably have a clearer picture of the academic direction you want to pursue in your studies. If not, you may want to talk to several staff members, your mentor, or the academic advisor. In the specialization for your subject, there are people that you may want to be involved with for your final graduation phase. In order to compose a well-balanced program that provides adequate prerequisites for this project, it is advisable to first choose and consult a project supervisor in the specialization of your interest (or a representative of the group in which you think you might like to graduate) before choosing elective courses.

4.1 Curriculum

The Master track Information Security Technology is a two-year program of 120 ECTS in total. The program is only offered as a full-time study program, so students should take on average three courses per quarter. (If you want to regularly take fewer or more courses each quarter, you should talk to the academic advisor (section 10.3))

The 2023 IST curriculum has the following format:

<table>
<thead>
<tr>
<th>IST curriculum component</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory courses</td>
<td>30</td>
</tr>
<tr>
<td>IST Stream electives</td>
<td>15</td>
</tr>
<tr>
<td>IAM and CSE elective courses</td>
<td>20</td>
</tr>
<tr>
<td>Free electives</td>
<td>15</td>
</tr>
<tr>
<td>Graduation Phase (preparation phase + graduation project)</td>
<td>10+30</td>
</tr>
</tbody>
</table>
(Note: if you started in a different academic year, you can see the Program and Examination Regulations from your start year. That is by default the curriculum you follow.)

4.1.1 Mandatory courses
The table below shows the core courses that make up the foundation of the IST program. For more information about the course, check the Osiris course catalogue.

**Mandatory courses (30 ECTS):**

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2IMS25</td>
<td>Principles of data protection</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2MMC10</td>
<td>Cryptology</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2DMI20</td>
<td>Software Security</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2IMS20</td>
<td>Cyberattacks, crime and defenses</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>2IMS30</td>
<td>Advanced network security</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2IMS00</td>
<td>Seminar IST</td>
<td>5</td>
</tr>
</tbody>
</table>

It is recommended to take the mandatory courses in your first quartiles, rather than waiting until the second year. For example, a student who starts in Quarter 1 would take 2IMS25, 2MMC10, and one stream elective (or homologation course) in their first quarter.

The exception is the seminar: students who start the master program in the second semester should take the seminar closer to the start of their graduation phase.

4.1.2 IST Stream Electives
At least three courses (15 ECTS) need to be taken from the list of IST Electives; you do not need to take all these courses. If you want to take more than three of these courses, they can count in the other categories of electives.

**IST Stream electives (15 ECTS needed):**

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2IMA10</td>
<td>Advanced algorithms</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>2IMS10</td>
<td>Physical aspects of digital security</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>2DMI10</td>
<td>Applied cryptography</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>2DMI100</td>
<td>Cryptographic protocols</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>2IMS15</td>
<td>Verification of security protocols</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>2IMS40</td>
<td>Intrusion Detection Laboratory</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>2IMS50</td>
<td>Introduction to quantum computing and security</td>
<td>5</td>
</tr>
</tbody>
</table>

4.1.3 IAM and CSE courses
20 ECTS of the IST program is made up of electives from the list of courses from the Computer Science in Engineering master track (can be foundational, deepening, or specialization courses), or the courses from the Industrial and Applied Mathematics Master program. The CSE courses are listed in Chapter 3. A list of IAM courses can be found in the Program and Examination Regulations (Appendix A). An internship (15 ECTS) (section 1.6.5) can also count towards this section.
4.1.4 Free Electives
To compose the 15 ECTS free electives part of your study program you can choose courses to broaden your horizon from:

- Other TU/e programs
- Other universities
- CSE or focus area foundation or deepening courses

In principle, all master courses offered at the TU/e can be chosen as free electives. Taking other mathematics and computer science related courses is recommended, as well as security-related courses from other universities (provided their topics do not overlap with the TU/e courses you already take). You can also take EWUU, EuroTeq, or international exchange courses (see sections 1.6.3, 1.6.4, and 1.6.5). Remember that the courses you choose must be approved (section 1.6).

Note that if you have homologation courses (section 1.6.2), these are part of your free electives. It is also possible to include up to 15 ECTS of bachelor-level courses as part of your free electives. Note that any homologation courses contribute to this 15 ECTS maximum. If you want to take bachelor-level courses as part of your master’s degree, but they were not assigned to you as homologation courses, this should be discussed with your mentor and your academic advisor, and needs to be approved by the examination committee. It is recommended to request this approval well in advance of taking the bachelor course(s).

4.1.5 Graduation phase
The graduation phase is worth 40 ECTS. It is made of the preparation phase (10 ECTS) and the graduation project (30 ECTS). IST students can do their graduation phase with a computer science research cluster or with the Coding and Crypto group from the discrete mathematics cluster. You do not need to register for the Preparation phase or Graduation Project in Osiris. (Note: Some people call the graduation phase or graduation project the “master project” or “master thesis”. This is mentioned here to avoid confusion.)

Students usually start the preparation phase in the 5th or 6th quarter of their studies, followed by the graduation project in the 7th and 8th quarters. The Preparation phase must be completed before the start of the graduation project. If homologation units are chosen, then they must be completed before the start of the preparation phase.

Please see section 1.8 for details on the Graduation Phase.

4.2 Graduation Checklist
The Graduation Checklist page of the Education Guide website provides you with a step-by-step guide for the administrative requirements during your master program.
The design of innovative software and hardware is the core of technological and industrial progress. Both the departments of Mathematics and Computer Science and Electrical Engineering play an active role in the development of new, innovative technology. The Master of Science program in Embedded Systems at the TU/e is illustrative of this active role, as it is a co-production of these two departments, awaiting students with a background in computer science, as well as graduates from the field of electrical engineering.

The program rests on a sound theoretical foundation, with emphasis on the design of quality embedded systems. As a graduate of this program, you will have developed a scientific attitude and an engineering approach to the field. Your position will be the design of embedded systems from a high-level architecture viewpoint, via requirements and behavioral specifications and using platforms, hardware, and silicon. You will be able to play a leading role in the development of embedded systems, either in scientific research, in industry or governmental organizations.

The Embedded Systems program focuses on the design of reliable and resource-efficient (e.g., energy, computational and network resources) systems. For this you need knowledge of algorithms, performance, software-hardware integration, methods of design, validation, testing and documentation, and an insight into the variability and maintainability of these protocols. All these aspects are addressed in the compulsory part of the program. The Embedded Systems program at the TU/e is offered in close collaboration with Delft University of Technology (TUD) and the University of Twente (UT) in the context of the 4TU federation.

### 5.1 Curriculum

The master program on Embedded Systems is a two-year program of 120 ECTS in total. The curriculum consists of courses offered by the Computer Science division of the department Mathematics and Computer Science and the department of Electrical Engineering.

<table>
<thead>
<tr>
<th>ES curriculum component</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory courses</td>
<td>25</td>
</tr>
<tr>
<td>Stream mandatory courses</td>
<td>15</td>
</tr>
<tr>
<td>Stream electives</td>
<td>15</td>
</tr>
<tr>
<td>Free electives</td>
<td>25</td>
</tr>
<tr>
<td>Graduation Phase (preparation phase + graduation project)</td>
<td>10+30</td>
</tr>
<tr>
<td><strong>TOTAL</strong></td>
<td><strong>120</strong></td>
</tr>
</tbody>
</table>

The curriculum has a core of 25 EC consisting of five courses that are mandatory for all Embedded Systems students. The curriculum is further structured into four streams. Students choose one stream and follow its courses. The streams are:

- Systems on Chip
- Embedded Software
- Embedded Networking
- Cyber-Physical Systems

In the following sections, more details for each of the streams are given.

The purpose of the streams is, on the one hand, to provide guidance to students in composing coherent study programs, and on the other hand, to preserve the multidisciplinary nature of each individual Embedded Systems study program. Each stream is made of a mandatory part of 15 ECTS and a stream elective part of 15 ECTS. Each stream has its own list of stream electives.

The graduation project of the Embedded Systems program consists of a 10 ECTS preparation phase and a 30 ECTS graduation project. The remaining 25 ECTS of the program may be composed of free electives.

Students are encouraged to consider including international experience (courses or research in another country) as part of their program. However, this is not required.

### 5.1.1 Mandatory courses

The following are the mandatory courses of the Embedded Systems program

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2IMF30</td>
<td>System Validation</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>5SIA0</td>
<td>Embedded Computer Architecture</td>
<td>5</td>
</tr>
<tr>
<td>2</td>

<td>Real-time Systems</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>2IMN25</td>
<td>Quantitative evaluation of Cyber Physical Systems</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>5LIB0</td>
<td>Embedded Systems Laboratory</td>
<td>5</td>
</tr>
</tbody>
</table>

### 5.1.2 Systems on Chip Stream

Modern chips are rapidly evolving into complete Systems on Chip (SoCs). The emergence of SoCs leads to new challenges in VLSI design, design automation, programming and code generation, task and communication mapping and scheduling, memory management, and model-driven design-space exploration. This stream addresses the design of SoCs with special attention for the various design trade-offs and formal verification techniques to support correct design.

Students who choose this stream must take all its Mandatory courses, and at least 15 ECTS of its Stream elective courses. Additional stream electives can be taken, which will count as free electives.

<table>
<thead>

[Table continued on next page]
Quarter | Course code | Course name | ECTS
--- | --- | --- | ---
2 | 2IMNT1 | Embedded computer architectures | 3
2 | 5LIG0 | Applied Combinatorial Algorithms | 5
2 | 5LIF0 | Advanced Digital Circuit Design | 5
2 | 5LIL0 | Intelligent Architectures | 5
2 | 5LIE0 | Multiprocessors | 5
2 | 5LIM0 | Parallelization, Compilers and Platforms | 5
2 | 5SIB0 | Electronic Design Automation | 5
2 | 5LIJ0 | Embedded Control Systems | 5
3 | 5LIA0 | Embedded Visual Control | 5
2, 4 | 2IMF00 | Seminar Formal System Analysis | 4

1 It is forbidden to include both of the following courses as part of your Master program of examinations: 5LIH0 Digital integrated circuit design and 5LIP0 Digital integrated circuits: fundamentals.
2 At least 15 credits of this list of stream electives have to be chosen.
3 The course 2IMNT1 is offered by TU Twente in Enschede. Secondary enrollment at the TU Twente us required to take the course.
4 A seminar may be followed starting from the fourth quarter of the program.

### 5.1.3 Embedded Software stream

The behavior and functionality of embedded systems is largely determined by the software that it runs. This stream focusses on the development of embedded software addressing aspects such as model-driven design, domain specific languages, code generation techniques, and formal techniques to solve scheduling problems.

Students who choose this stream must take all its Mandatory courses, and at least 15 ECTS of its Stream elective courses. Additional stream electives can be taken, which will count as free electives.

</tbody>
</table>
5.1.4 Embedded Networking stream

Embedded Networking (EN) refers to the powerful trend of the last twenty years of connecting embedded systems into networks. For electronic systems in automotive, for example, the network is often the point of integration. More recently we have seen the concept of the Internet of Things, the vision that everyday objects get enriched with embedded electronics, that these objects are uniquely identified and communicate using a unified protocol and naming scheme. EN includes the fields of sensor networks, but also networked systems that represent a platform and are not identical to the application. From the sensor network domain, concerns of effective resource management (like size, energy, memory, communication bandwidth) are derived. Quality metrics for EN include performance (latency, throughput), dependability (quality of service) and scalability. Besides these, EN challenges lie in the architecture of system and software, in management and sharing of distributed resources, in interoperability and semantics, in security and privacy, and in application development. While it is fairly easy to sketch advanced applications, it is not straightforward to realize these in a cost-effective manner. Relevant topics for this stream are distributed systems (architecture and protocols), networked systems, data semantics, network security, system correctness, and resource management.

<table>

*At least 15 credits of this list of stream electives have to be chosen.*

A seminar may be followed starting from the fourth quarter of the program.
A seminar may be followed starting from the fourth quarter of the program.

5.1.5 Cyber-Physical Systems stream
Cyber-Physical Systems are characterized by a tight coupling between embedded computer (cyber) systems and physical processes, monitored and controlled by those computer systems. Cyber-physical systems require integral, multidisciplinary design, involving computer engineering, control, mechatronics, networking, signal processing, and mathematical modelling. The stream focuses on the control and signal processing aspects of cyber-physical systems.

5.1.6 Free electives
To compose the 25 EC free electives part of your study program you can choose courses to broaden your horizon from:

- Other TU/e programs
- Other universities
- More courses from the Embedded Systems curriculum
- An internship (section 1.6.5)

In principle, all master courses offered at the TU/e can be chosen as free electives. In particular, we would like to encourage you to include SFC640 Academic Writing in English as one of the free electives. Note that you must take a placement test with the language center before you can register for SFC640. You can also take EWUU, EuroTeq, or international exchange courses (see sections 1.6.3, 1.6.4, and 1.6.5). Remember that the courses you choose must be approved (section 1.6).

Note that if you have homologation courses (section 1.6.2), these are part of your free electives. If an Embedded systems student was suggested to take a homologation course in their admission letter, it is not required that the student follows the course, but it is highly recommended. Students are also recommended to test their own background knowledge with the homologation
recommendation tool. If you do not know how to access the homologation recommendation tool, contact the academic advisor.

While you are encouraged to focus on Master courses, it is also possible to include up to 15 ECTS of bachelor-level courses as part of your free electives. Note that any homologation courses contribute to this 15 ECTS maximum. If you want to take bachelor-level courses as part of your master’s degree, but they were not assigned to you as homologation courses, this should be discussed with your mentor and your academic advisor, and needs to be approved by the examination committee. It is recommended to request this approval well in advance of taking the bachelor course(s).

5.1.7 Graduation Phase
The graduation phase is worth 40 ECTS. It is made of the preparation phase (10 ECTS) and the graduation project (30 ECTS). ES students can do their graduation phase with computer science or with Electrical Engineering (see section 9). You do not need to register for the Preparation phase or Graduation Project in Osiris. (Note: Some people call the graduation phase or graduation project the “master project” or “master thesis”. This is mentioned here to avoid confusion.)

Students usually start the preparation phase in the 5th or 6th quarter of their studies, followed by the graduation project in the 7th and 8th quarters. The Preparation phase has to be completed before the start of the graduation project. If homologation units are chosen, then they must be completed before the start of the graduation project.

Please see section 1.8 for details on the Graduation Phase.

5.2 Graduation Checklist
The Graduation Checklist page of the Education Guide website provides you with a step-by-step guide for the administrative requirements during your master program.
Data Science & Artificial Intelligence

As the name of the program implies, the MSc Data Science & Artificial Intelligence (DS&AI) program is grounded in two scientific disciplines: data science and artificial intelligence. The main aim of the program is to educate Masters of Science in engineering who are able to combine advanced data analytics techniques and AI methods in order to understand, apply and create systems that behave intelligently and extend human intelligence in a responsible, transparent, and explainable way.

We strongly believe that society needs experts who can support and enhance our human capabilities to solve complex problems, gain deeper understanding, and achieve results that were not attainable before in a trustworthy and explainable way, by analyzing (large amounts of complex) data and representing, analyzing, and reasoning over (domain) knowledge using the structured skills, techniques, and the deep knowledge and understanding of Data Science methods with the state-of-the-art methods of AI.

The DS&AI program has the ambition that DS&AI graduates are Data Scientists and AI Engineers with the ethos of a “civil engineer,” having deep technical abilities in the above expertise areas to develop smart solutions (instead of brute forcing) that

- are robust, trustworthy, fair, and secure,
- work together with people (not instead of),
- include the human factor in the process and in the result, and
- turn data into value under technical, social, and ethical aspects.

Hence the core content of the intended DS&AI program is the combination of its two underlying scientific disciplines, data science and artificial intelligence together with ethics and challenge-based learning. Data Science studies all principles and techniques of collecting, storing, managing, preparing, processing, analyzing, and visualizing data. Artificial Intelligence studies all principles and techniques for supporting and augmenting intelligent behavior. These two disciplines create knowledge from data and intelligence from knowledge.

There are many different areas within Data Science & Artificial Intelligence that support this process. The Master’s program DS&AI is organized around six areas, each containing three to four coherent courses within the program. These areas are:

- Data Engineering and management
- Algorithmic Data Analysis
- Explainable Data Analytics
- Statistics
- Data Mining and Machine Learning
- AI and Machine Learning
Through ethics and challenge-based learning, students integrate their skills from the different expertise areas in various real-life contexts, providing reflection on their methodology and way of working as an AI Engineer.

6.1 Curriculum
The Master program Data Science & Artificial Intelligence is a two-year program of 120 ECTS in total. It is possible to enter the program at the start of either semester; however, starting in February is not advised and will most likely lead to a study delay. If you’d wish to start in February, always consult with the academic advisor first. The program is only offered as a full-time study program. However, it is possible to study at a different pace, taking fewer courses per quartile. Again, this should be discussed with the academic advisor (section 10.3).

6.1.1 Program Composition
The Master program on Data Science & Artificial Intelligence is structured into trajectories. Each trajectory contains a set of 2-4 coherent courses that go from foundational knowledge to advanced expertise. The image below shows the different types of courses and their scheduling. (Note that 2AMM30 and 2AMM40 have a capacity/enrolment limit, at least in academic year 2023-2024.) You compose your program of examinations by:

- Following all core courses in the trajectories of the program (30 credits)
  - 25 credits of mandatory core courses *(bold lined course in the table below)*
  - 5 credits of elective core courses *(bold, dashed lined courses)*
- Choosing specialization electives (30 credits) from the trajectories in the form of
  - 2 trajectories you declare as your major trajectories (10 credits per major trajectory).
    
    *It is recommended to refrain from declaring both AI & Machine Learning and Data Mining & Machine Learning as your major electives.*
  - 1 or 2 more trajectories you declare as your minor trajectories (10 credits total)
    1. 1 trajectory with 10 credits, or 2 trajectories 5 credits each
- Choosing free electives (15 credits)
- Completing your program with the graduation phase (45 credits) *(green courses)*
  1. 5 credits seminar
  2. 10 credits preparation phase
  3. 30 credits graduation project

[see image on next page]
### 6.1.2 Trajectories

The DS&AI program is divided into seven trajectories, listed here. These are described in further detail below.

1. Data Science & Artificial Intelligence in Context (general trajectory)
2. Data Management
3. Algorithms
4. Explainable Data Analytics
5. Statistics
6. Data Mining & Machine Learning
7. AI & Machine Learning

Trajectories number 2 through 7 can be elected as major or minor trajectory.

### Data Science & Artificial Intelligence in Context:

When working as an engineer in Data Science & Artificial Intelligence, you will identify and solve societal and technical problems. The problems you face will present themselves, not in a clearly defined technical manner as taught in the technical trajectories, but rather, you will encounter them in the context of an existing organization or system where specific stakeholders such as citizens, workers, customers, patients, farm animals, or wildlife face a problem. Your obligation as an engineer is to understand this context, its requirements and objectives and the different aspects and objectives that define what desirable and undesirable solutions are. More often than not, you will see that the problem and its objectives are different than initially presented to you by stakeholders in the light of available data; that data is incomplete or insufficient. You will also see that objectives from different stakeholders and context constraints contradict each other, both in being achievable through technical solutions, but also in their impact on the stakeholder and the context: a solution that works seemingly well according to various...
technical quality criteria may have potentially disastrous consequences for users, or people affected by this solution.

As an Engineer in Data Science & Artificial Intelligence, you must be aware of all the requirements and objectives of the problem you are aiming to solve, taking the full context into account.

**Data Management:** We live increasingly in a data-driven world. Data and data analytics play a central role not only in technical systems but also broadly in organizations and society, across government, academia, and industry, and both in private and public spaces. We are awash in massive complex data collections containing tremendous untapped value.

Data Management Systems (DMS) provide the fundamental underlying infrastructure to identify and realize this value. DMS provide for the end-to-end care, maintenance, and use of data towards revealing actionable insights into big data. Data-intensive systems consequently must address a broad range of basic scientific challenges, such as efficient scalable human-data interaction, explainable and secure data storage and access, knowledge modeling and extraction, and scalable data analytics for data science and artificial intelligence applications. DMS are responsible for efficiently and effectively addressing all of these intertwined challenges which are widespread in today’s data-driven science and organizations.

**Algorithms:** Algorithms play a fundamental role in Data Science: they enable efficient automated data handling, analysis and visualization. Typical data-science problems are often time-sensitive and complex, and not even necessarily well-defined. To develop algorithmic solutions for such challenges which deliver high-quality results in a verifiable, and hence also explainable, manner, a broad set of algorithmic tools is a necessary and important part of the repertoire of each data scientist.

**Explainable Data Analytics:** The courses in this trajectory teach you techniques to explore and integrate various kinds of complex data by designing problem-specific visualization pipelines for data summarization, feature engineering, and hypothesis generation and evaluation (2AMV10). You will learn how to analyze data from more than one viewpoint, revealing new features and properties that are crucial for better data understanding and learning behavioral models (2AMV10, 2AMI20). You will learn how to construct highly explainable behavioral models and process models that we call glass-box models through unsupervised learning that visually describe any kind of behavior (processes) in an easily understandable manner (2AMI10, 2AMI20). On the example of process models, you will learn to adopt a mindset of evaluating models not just in terms of aggregate errors measures but along various quality dimensions including precise diagnostic information that can explain the quality of the model for each data point (2AMV10, 2AMI10, 2AMI20), and how to use the diagnostic information for improving model quality (2AMI20). The course 2AMU30 Uncertainty Representation and Reasoning from the “AI & Machine Learning” trajectory cover this topic from the angle of Machine Learning and Artificial Intelligence.

**Statistics:** Statistical analysis aims to understand relevant characteristics of (sub)populations or phenomena that are described by the collected data. This field of data science and artificial intelligence contains a wealth of statistical models and techniques that can summarize data into understandable statistical quantities and features that have direct impact and interpretation to real-world situations. It contains methods that may help in collecting data (e.g. survey sampling, experimental design), modeling data (e.g. time-series, linear, non-linear, and generalized mixed models, survival and reliability), and exploring or learning from data (e.g. clustering analysis, discriminant analysis, resampling). The field characterizes itself by its capability of analyzing
complex data sets and properly describing or addressing the inherent uncertainty (data collection variabilities, measurement errors, incompleteness, outliers, heterogeneities, systematic biases) in the observed data.

Choosing the appropriate statistical method for the analysis of a specific data set requires knowledge, experience, skill, and practice. For large and complex data sets there are often many different ways that a data set can be approached, and it is imperative that the strengths and weaknesses of the statistical analyses are known to the user for the tasks at hand. In large and complex data sets it is impossible to address in a statistical analysis all the different data aspects present in a data set, since statistical methods may not always be rich enough to capture all these aspects. Knowing what aspects of the data in combination with the statistical models and methods can be ignored or treated as nuisance is an important part of statistical analysis.

**Data Mining & Machine Learning:** Data mining and machine learning study foundations and practical approaches for knowledge discovery from vast collections of complex data. This knowledge may come in the form of patterns, descriptive, predictive and prescriptive models.

This trajectory focuses on data mining and machine learning approaches and techniques for developing end-to-end solutions for algorithmic decision making. These are so pervasive today that you probably use them dozens of times a day without knowing it, for instance in web search, speech recognition, and a variety of mobile phone applications. It is also a crucial component of data-driven industry, scientific discovery, and modern healthcare. One of the fascinating aspects of data mining and machine learning is that they automate the process by learning from examples rather than being explicitly programmed. We, as engineers, come up with approaches for meta-programming. That is, we develop intelligent computer programs that can learn to induce new useful programs from the training examples.

**AI & Machine Learning:** Artificial intelligence and machine learning involve the study of algorithms that improve through experience. The fields cover topics that are essential towards obtaining agents with some type of intelligence, including knowledge and learning representations, model learning from data, reasoning and planning under uncertainty, causality, language processing, signal and vision, and often make use of core methods and techniques from optimization, statistics, probability, algorithmic development, and so on. This trajectory explores AI and machine learning from multiple angles on principles of AI, theories of representation, AI models, algorithms for learning, reasoning and decision making. There is also an important focus on solutions that are not only accurate but efficient, reliable, interpretative, robust and trustworthy.

### 6.1.3 Free Electives

To compose the 15 EC free electives part of your study program you can choose courses to broaden your horizon from:

- Recommended DS&AI electives (see below)
- Other TU/e programs
- Other universities
- Capita selecta

In principle, all master courses offered at the TU/e can be chosen as free electives. Taking other mathematics and computer science related courses is recommended, as well as computer science related courses from other universities (provided their topics do not overlap with the TU/e courses you already take). You can also take EWUU, EuroTeq, or international exchange courses (see...
sections 1.6.3, 1.6.4, and 1.6.5). **Remember that the courses you choose must be approved** (section 1.6).

Note that if you were assigned any homologation courses (section 1.6.2), these are part of your free electives. Next to assigned homologation courses, it’s possible to include bachelor-level courses in your program as part of your free electives, but only if these courses provide you with necessary prior knowledge for core courses, core electives or major/minor trajectory electives. Homologation courses and bachelor-level courses within your program cannot exceed 15 ECTS. If you want to take bachelor-level courses as part of your master degree, but they were not assigned to you as homologation courses, this should be discussed with your mentor and your academic advisor, and needs to be approved by the examination committee. It is recommended to request this approval well in advance of taking the bachelor course(s).

The following courses are recommended free electives for DS&AI:

1. *It is required to take a placement test with the Language Center before being allowed to register for SFC640.*
2. *The capita selecta can be followed only by permission of the responsible lecturer. Further questions about the capita selecta can be directed to the academic advisor.*

**6.1.4 Seminar**

Students should take 1 seminar from the list below.
### 6.1.5 Graduation phase

The graduation phase is worth 40 ECTS. It consists of the preparation phase (10 ECTS) and the graduation project (30 ECTS). You do not need to register for the Preparation phase or Graduation Project using Osiris. (Note: Some people call the graduation phase or graduation project the “master project” or “master thesis”. This is mentioned here to avoid confusion.)

Students usually start the preparation phase in the 5th or 6th quarter of their studies, followed by the master project in the 7th and 8th quarters. The Preparation phase has to be completed before the start of the graduation project. If you were assigned any homologation courses, then they must be completed before the start of the preparation project.

**Please see section 1.8 for details on the Graduation Phase.**

### 6.2 Graduation Checklist

The Graduation Checklist page of the Education Guide website provides you with a step-by-step guide for the administrative requirements during your master program.
TU/e participates in the EIT Digital Master School. There are the EIT digital Embedded Systems track and the EIT digital Data Science track. Students in the EIT program follow the first year of their master at one of the participating EIT universities (called the student’s “entry-point university”), and the second year at another (called the “exit-point university”). After completion of the program, the student gets a degree from both universities and a certificate.

Students who want to follow the EIT master programs must apply through EIT; it is not possible to switch to EIT from one of the other Master programs of Computer Science. More information about these programs is available on the EIT digital master school’s website.

7.1 EIT Embedded Systems
As of academic year 2023-2024 TU/e only offers an exit-point program for EIT Embedded Systems. The section below describes the curriculum in detail.

7.1.1 EIT Embedded Systems Exit Point Program
The EIT-ES exit-point program has four mandatory courses. Students also choose at least 9 ECTS of electives and do a graduation project (Master thesis). These categories are described in detail below the Curriculum Overview table.

### Curriculum Overview

<table>
<thead>
<tr>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory courses</td>
</tr>
<tr>
<td>Electives (Embedded Systems elective)</td>
</tr>
<tr>
<td>Graduation project/ Master thesis</td>
</tr>
<tr>
<td><strong>TOTAL</strong></td>
</tr>
</tbody>
</table>

**Mandatory courses (21 ECTS)**

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Course code</th>
<th>Course name</th>
<th>ECTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2IMN10</td>
<td>Architecture of Distributed Systems</td>
<td>5</td>
</tr>
<tr>
<td>1</td>
<td>5LIC0</td>
<td>Networked Embedded Systems</td>
<td>5</td>
</tr>
<tr>

<td>Innovation and Entrepreneurship Study</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>2IMN15</td>
<td>Internet of Things</td>
<td>5</td>
</tr>
</tbody>
</table>

**Electives (Embedded Systems electives) (9 ECTS)** must be chosen from the Stream Mandatory and Stream Elective courses of the master program Embedded Systems. See Chapter 5 for the list of courses. Almost all courses are worth 5 ECTS, so you will likely end up taking 10 ECTS of electives. Students also have the option of taking 2IMC05/5T514 Preparation for Graduation Project ES as an elective, under the condition that the intended supervisor agrees. More information about the Preparation phase for the graduation project can be found in section 1.8.

**Graduation Project/Master Thesis (30 ECTS):** see section 1.8 for more details.
7.2 EIT Data Science
As of academic year 2023-2024 TU/e only offers an exit-point program for EIT Data Science. The section below describes the curriculum in detail.

7.2.1 EIT Data Science Exit Point Program
The EIT-DS exit-point program has 5 mandatory courses. Students also choose one seminar and do a graduation project (Master thesis). The courses and seminar are described in more detail below the Curriculum Overview table.

Curriculum Overview

Graduation Project/Master Thesis (30 ECTS): see section 1.8 for more details.
Erasmus Mundus Joint Master Degree: Big Data Management and Analytics

Students following the Big Data Management and Analytics Master program can do the second year of their master program at TU/e to specialize in Business Process Analytics. It is not possible to switch to BDMA from one of the other Master programs of Computer Science at TU/e. Details about the program are available on the BDMA website.

The following table summarizes the BDMA specialization program at TU/e:

<table>
<thead>
<tr>
<th>Quarter</th>

</tbody>
</table>

If BDMA students have questions about their program, they can contact the academic advisor (section 10.3) or the BDMA Program Manager, dr. Renata Medeiros de Carvalho.
Part III: Organization and Regulations
Research Groups

There are different research groups associated with the master programs. On the Education Guide, each group provides a short description of their research area and mentions some courses that are relevant for students who are interested in their research. The courses are not meant to be obligatory for candidate graduates, but they are highly recommended and give an impression of the predispositions of the staff. You can check which groups offer the courses you have enjoyed most and use this information when choosing a research group for your graduation project. The contact person mentioned may give you additional information.

All master courses offered by the Computer Science department start with 2IM, or 2AM for Data Science, followed by a letter representing a research group, as follows:

A: Algorithms, Geometry and Applications
C: Courses not specific for a research group such as internship or master project,
D: Databases
F: Formal System Analysis
I: Process Analytics
M: Data Mining
N: Interconnected Resource-aware Intelligent Systems
P: Software Engineering and Technology
S: Security
U: Uncertainty in AI
V: Visualization
10 Academic Administration

10.1 Education and Student Affairs (ESA)
The Education and Student Affairs helpdesk is your contact point for general information and inquiries about tuition and financing, admissions, enrollment at TU/e, course registration, exam regulations etc.

Location: first floor of MetaForum
Email: ESA@tue.nl or ESAhelpdesk@tue.nl
Phone: 040 247 4747

10.2 Departmental Student Administration (CSA)
You can contact the departmental student administration with your forms, questions about graduation or your diploma, transcripts, statements on expected graduation, and other topics.

Email: mcs.csa@tue.nl
Office: MF 3.090
CSA desk is open: Monday-Friday 12:00-14:00 (closed during some holidays)

10.3 Academic advisor
The academic advisor is a non-academic staff member who knows the details of your program’s curriculum and how the regulations apply to various situations. They can also tell you about the diverse array of resources offered to students at our university.

You can approach your academic advisor with questions about study planning, but also with other topics. For example, you can contact them if you have a personal issue that is affecting your studies or simply can’t figure out where to start with a question. They will either help you themselves or refer you to another staff member when necessary.

You can reach them by:
- Email
- Making an appointment (see Student Guidance page of the Education Guide for link to make an appointment)
- Drop-in (contact academic advisor for your program’s weekly drop-in hours)

Contact info:

Program: DS&AI
Name and email address: Jet Verbeeten and Katie MacLeod
Email: MCS.Academic.Advisor.DSAI@tue.nl
CSE, IST, ES, EIT, BDMA: Angie Lammen and Sofie Linskens
Email: MCS.Academic.Advisor.MCS@tue.nl

All Pre-Master Programs: Katie MacLeod
Email: MCS.Academic.Advisor.Premaster.MCS@tue.nl

10.4 Examination committee
The Departmental Board appoints an Examination Committee for each program. There is one for CS master programs combined: CSE, ES, IST and DSIE, and one for DS&AI. The Examination Committee is responsible for organizing and coordinating the examinations, and for appointing examiners. Its members are all drawn from the Computer Science and Engineering teaching staff. The Examination Committee must approve the Examination Regulations to ensure the probity and integrity of all examinations and will take all necessary measures in this regard.

When a student has a request related to the Program and Examination Regulations, they make that request through the Examination Committee. The process is as follows: The student should contact the academic advisor about their request. The academic advisor then advises the student on the request and directs the student to the webform that is used to make a request to the Examination Committee.

10.5 Program Committee
The program committee (OC) is appointed by the Department Board, and it has the following tasks:

- to advise the program director and the Department Board on issues relating to the Program Examination Regulations (PER)
- to annually evaluate the implementation of the PER
- to advise on all issues relevant to the academic program

10.6 Study Associations: GEWIS and D.S.A. Pattern
GEWIS is the study association for mathematics and computer science students at TU/e. GEWIS can be reached at: MF 3.155, phone number (040) (247) 2815, the website http://www.gewis.nl, and e-mail: board@gewis.nl.

D.S.A. Pattern is the study association for all Data Science students at TU/e, Tilburg University (TiU), and the Jheronimus Academy of Data Science (JADS, Den Bosch). D.S.A. Pattern can be reached at: MF3.061 (TU/e), Tias 6.27 (TiU) and MDB S.07 (JADS), phone number (040) (247) 8464, the website https://dsapattern.nl/ and email: info@dsapattern.nl.

The Study Associations also play an important role for students and the quality of education in the master programs. If students have comments or concerns, they can contact the study association.
10.7 Information resources

Current information on program regulations, program changes, changes in the course schedules, practical courses, exams, and other important matters is available as listed below.

Leading information on the program:
- The Program and Examination Regulations (see Appendix A).

Personal contact at the department:
- Academic advisors (see section 10.3)
- Student Administration (CSA) (see section 10.2)
- International exchange coordinator: Mrs. M. Kappé - Mes: MCS.Exchange@tue.nl
- The Study Associations GEWIS and Pattern (see section 10.6).

Several sources of information are available online:
- Information about the department, academic counseling, etc. can be found on the Education Guide https://educationguide.tue.nl/
- The electronic course catalogue can be accessed at https://tue.osiris-student.nl/#/onderwijscatalogus/extern/start?taal=en and contains current course information. Also, examinations and course schedules are available at this webpage.
- Video recordings of lectures: http://videocollege.tue.nl/
- Information about TU/e Online systems: https://educationguide.tue.nl/practical-info/it-services/online-systems/?L=2
- Directive Double Diplomas. These are the regulations for students doing a double degree. The details can be found on the Education Guide
Appendix A

Program and Examination regulations

The Program and Examination Regulations (PER) is a document that contains all the information on education and examination for a program. This includes the content of the program (curriculum) and the testing within the program. The PER for all master programs can be found at the following link:

To supplement the PER, the examination committees have made the Regulations of the Examination committee. This document clarifies and specifies details of the regulations within a program. The Regulations of the Examination Committee for your master program can be found on the Education Guide page of your master program.
