How to incorporate sustainability in courses

Identify new frameworks, such as Challenge-Based Learning (CBL), where there is room for experimentation to develop a critical mindset.

Conduct sustainability training for teaching staff to help them grasp the complexity of, and debunk myths on, sustainability.

In using the 17 Sustainable Development Goals (SDGs) as a framework, avoid the checklist approach, and instead employ a systemic view of the challenges we are facing.

Have teachers be critical of their own role, and help each other improve through teacher-to-teacher reviews of course materials, for example.

How to integrate sustainability into TU/e education

Institutionalize sustainability by rewarding good examples and formulating binding requirements.

Bridge the gap between what we say about sustainability and what we actually do.
