

THIS IS THE RESPO X MONTHLY NEWSLETTER

WELCOME TO THE RESPO X PROJECT!

The RESPO X project is intended to address **digital transformation by developing and validating the RESPO X application**, which will support learners to systematically improve their competences and skills. Environment and the fight against climate change are also very important issues that are closely related to the project's goals, because the planned transdisciplinary training modules also address students' **development of STEM and environmental sustainability competences**. Students are provided with the necessary skills that also help them to live ethically and contribute to society's environmental sustainability.

The project's entire voyage will be green as well. As an update to our project's progress, from the **12th to the 16th of September**, the project partners met both online and face-to-face in **Larissa, Greece**, to attend the staff training, along with the second transnational project meeting, hosted by **Innovation Hive**.

Co-funded by
the European Union

TRAINING GOALS

The training was completed successfully, with the active participation of the project partners, fulfilling the following goals:

- The validation of the RESPO X application
- The proposal of possible ways for the application to be transferred in the HE environment
- The selection of a core set of skills for the training courses
- The selection of courses for the transdisciplinary training
- The finalization of the selection criteria for the students that will participate at the C2 training in Barcelona
- Brainstorming on effective ways to optimize the application

After the very interesting and enlightening training, the project partners attended the second transnational project meeting, **discussing project management issues, dissemination, communication, and planning the project's next steps.**

From the partnership of the RESPO X project, we will keep you posted on the project updates, and next milestones!
